HS 9111

TECHNICAL ENGLISH I

(Common to all branches of B.E. / B.Tech. Programmes)

L T P C

3 1 0 4

Aim:

To help students specialising in the field of Engineering and Technology develop their proficiency in oral and written communication in Technical English.

Objectives:

1. To enable students improve their vocabulary and employ the words appropriately in different academic and professional contexts.
2. To make students comprehend classroom lectures and technically oriented passages.
3. To enable students develop suitable reading strategies that could be adopted while reading science related texts.
4. To enable students acquire the ability to speak effectively in English in real life situations and work-related situations.
5. To train students in academic and professional writing.

UNIT I

9+3

Vocabulary - using words in context - use of suffixes to form nouns from verbs and adjectives – adjectives, adverbs - matching words with meanings - Active and passive voices – tenses - simple present, present continuous - comparative adjectives – adverbial forms - Reading text: skimming for general information - specific details - note making - cloze reading – Listening and transferring of information from text to graphic forms - bar charts, flow-charts - Paragraph writing - descriptions using descriptive words and phrases - organising information - Role play - conversational techniques – discussions - oral reporting.

UNIT II**9+3**

Vocabulary items - words with prefixes (“multi-“, “under-“) - Asking and answering questions, error correction - spelling and punctuation - Reading Comprehension - scanning for information – inferring meaning from context - Listening and guided note-taking - paragraph writing - using notes – giving suitable headings / subheadings for paragraphs – Comparing and contrasting using expressions of comparison - Discussion using creative ideas

UNIT III**9+3**

Compound nouns - negative prefixes – antonyms – Use of modal verbs – making sentences using phrases – tenses – simple past and present perfect - Reading and guessing meanings in context - Listening and note taking - Channel conversion from text to chart - Writing comparisons - making recommendations - coherence using discourse markers - Discussion - role-play (explaining and convincing)

UNIT IV**9+3**

Expanding nominal compounds – words with multiple meanings – Error correction - prepositions - use of the prefix “trans-“ - compound adjectives - modal verbs to express probability - simple past and present perfect - Reading – prediction of content - understanding advertisements - scanning the text and comprehension check - Listening for details - Writing definitions – expression of use and purpose - Role-play – discussion - speculating about the future

UNIT V**9+3**

Formation of nouns, verbs and adjectives from root words – some useful phrases and expressions - cloze exercises - ‘If’ conditional clauses – gerunds (verbal nouns) - Reading for comprehension - intensive reading - Accuracy in listening – listening to discussion on specific issues - Group discussion - role-play (stating, discussing problems and proposing solutions) - Planning a tour - Writing an itinerary - Writing formal letters - letter to the editor

Lecture – 45**Tutorial – 15****Total – 60 Periods**

TEXTBOOKS:

1. Department of Humanities and Social Sciences, Anna University, **English for Engineers and Technologists, Vol. I and II (Combined Edition)**, Orient Longman, Pvt. Ltd., 2006. Themes 1 to 4.

MA 9111

MATHEMATICS – I

(Common to all branches of B.E. / B.Tech. Programmes)

L T P C
3 1 0 4

Aim:

To make available the basic concepts of engineering mathematics, to prepare the student for new concepts to be introduced in the subsequent semesters and to provide the necessary mathematical skills that are needed in modeling physical processes by an engineer.

Objectives:

- To develop the use of matrix algebra techniques this is needed by engineers for practical applications.
- To make the student knowledgeable in the area of infinite series and their convergence so that he/ she will be familiar with limitations of using infinite series approximations for solutions arising in mathematical modeling
- To familiarize the student with functions of several variables which is needed in many branches of engineering
- To introduce the concepts of improper integrals, Gamma, Beta and Error functions which are needed in engineering applications
- To acquaint the student with mathematical tools needed in evaluating multiple integrals and their usage

UNIT I MATRICES**9+3**

Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties of eigenvalues and eigenvectors – Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms.

UNIT II INFINITE SERIES**9+3**

Sequences – Convergence of series – General properties – Series of positive terms – Tests of convergence (Comparison test, Integral test, Comparison of ratios and D'Alembert's ratio test) – Alternating series – Series of positive and negative terms – Absolute and conditional convergence – Power Series – Convergence of exponential, logarithmic and Binomial Series.

UNIT III FUNCTIONS OF SEVERAL VARIABLES**9+3**

Limit and Continuity – Partial derivatives – Homogeneous functions and Euler's theorem – Total derivative – Differentiation of implicit functions – Change of variables – Jacobians – Partial differentiation of implicit functions – Taylor's series for functions of two variables – Errors and approximations – Maxima and minima of functions of two variables – Lagrange's method of undetermined multipliers.

UNIT IV IMPROPER INTEGRALS**9+3**

Improper integrals of the first and second kind and their convergence – Evaluation of integrals involving a parameter by Leibnitz rule – Beta and Gamma functions – Properties – Evaluation of integrals using Beta and Gamma functions – Error functions.

UNIT V MULTIPLE INTEGRALS

9+3

Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Triple integrals – Volume of Solids – Change of variables in double and triple integrals – Area of a curved surface.

L: 45, T: 15, Total : 60 Periods

PH 9111

ENGINEERING PHYSICS

(Common to ALL Branches of B.E. / B.Tech. Programmes)

L	T	P	C
3	0	0	3

Objective:

To introduce the basic physics concepts relevant to different branches of Engineering and Technology

UNIT I PROPERTIES OF MATTER

9

Elasticity – Poisson’s ratio and relationship between moduli (qualitative) – Stress-strain diagram – factors affecting elasticity – bending of beams – cantilever – bending moment – theory and experiment of Young’s modulus determination – Uniform and non-uniform bending – I shaped girders – twisting couple – hollow cylinder – shaft – torsion pendulum – determination of rigidity modulus – moment of inertia of a body (regular and irregular).

UNIT II ACOUSTICS AND ULTRASONICS

9

Classification of sound – loudness and intensity – Weber-Fechner Law – standard Intensity and Intensity level – decibel – reverberation – reverberation time — rate of growth and decay of sound intensity - derivation of Sabine’s formula – absorption coefficient and its determination – factors affecting acoustics of buildings : focussing, interference, echo, Echelon effect, resonance – noise and their remedies. Ultrasonics – production – magnetostriction and piezoelectric methods – detection of ultrasound – acoustic grating – Industrial applications – NDT - Ultrasonic method: scan modes and practice.

UNIT III THERMAL PHYSICS

9

Thermal expansion - thermal stress – expansion joints – bimetallic strips - thermal conductivity – conduction in solids – Forbe’s and Lees’ disc methods – thermal insulation of buildings – Laws of thermodynamics – Otto and diesel engines and their efficiency – entropy – entropy of Carnot’s cycle – reverse Carnot’s cycle – refrigerator.

UNIT IV APPLIED OPTICS

9

Interference - Michelson interferometer: construction, working, determination of wave length and thickness – anti-reflection coating – air wedge and its application – Lasers – Einstein’s coefficients – CO₂, Nd:YAG and semiconductor lasers - construction and working – applications – Optical fibres – classification (index & mode based) – principle and propagation of light in optical fibres – acceptance angle and numerical aperture – fibre optic communication system - active and passive sensors.

UNIT V SOLID STATE PHYSICS

9

Nature of bonding – growth of single crystals (qualitative) - crystal systems - crystal planes and directions – expressions for interplanar distance – coordination number and packing factor for simple structures: SC, BCC, FCC and HCP – structure and significance of NaCl, ZnS, diamond and graphite – crystal imperfections: point defects, dislocations and stacking faults.

Total : 45 Periods

TEXT BOOKS:

1. Palanisamy, P.K., Engineering Physics, Scitech Publications (P) Lt, 2006.
2. Arumugam, M., Engineering Physics, Anuradha Publ., 2000.

REFERENCES:

1. Gaur R.K., and Gupta, S.L Engineering Physics, Dhanpat Raj Publ., 2003.
2. Sankar B.N., Pillai.S.O., Engineering Physics, New age International (P) Ltd, 2007

CY9111

ENGINEERING CHEMISTRY

Common to all branches of Engineering and Technology)

L T P C
3 0 0 3

Aim:

To gain a sound knowledge of thermodynamics, phase rule, surface chemistry and catalysis, basic organic reaction mechanisms and principles and applications of spectroscopy and nanochemistry.

Objectives:

To make the student conversant with the

- Applications of second law of thermodynamics.
- Phase rule and various types of alloys
- Surface chemistry and its importance in adsorption and catalysis.
- Basic principles in organic reaction mechanisms and principles and applications of spectroscopy
- Nanochemistry and its applications

UNIT I THERMODYNAMICS

9

Statement of second law of thermodynamics – Clausius and Kelvin – definition of entropy – entropy change for a reversible process – entropy change for flow of heat in an irreversible process – entropy change for an isothermal expansion of an ideal gas – problems – entropy of phase transitions- problems – definition of free energy and work function – Gibbs Helmholtz equation – applications – problems – derivation of Maxwell relations – van't Hoff isotherm and isochore – applications – problems – chemical potential – variation of chemical potential with temperature and pressure - significance.

UNIT II PHASE RULE

9

Phase rule – statements and explanation of the terms involved – condensed phase rule – construction of phase diagram – water system – sulphur system – phase rule for two component alloy systems- thermal analysis – eutectic system - Lead-Silver system – simple eutectic formation – Zinc-Magnesium alloy system – Iron-Carbon alloy system- solved examples.

UNIT III SURFACE CHEMISTRY AND CATALYSIS

9

Adsorption – types of adsorption – adsorption of gases on solids – adsorption isotherm – Freundlich and Langmuir isotherms – adsorption of solutes from solutions – applications – role of adsorption in catalytic reactions – ion exchange adsorption – basic principles in adsorption chromatography – Catalysis – classification – characteristics of catalysis - auto catalysis – enzyme catalysis – Michaelis – Menton equation – solid acid catalysis.

UNIT IV ORGANIC REACTIONS AND SPECTROSCOPY

9

Electrophilic and nucleophilic, substitution and elimination reactions mechanisms – SN^1 , SN^2 , E^1 , E^2 reactions – Electromagnetic spectrum – absorption of radiation – electronic transition – vibrational transition – rotational transition – intensities of spectral lines – beer-lamberts law –

type of instrument used for absorption measurements –UV & visible spectroscopy, IR spectroscopy – principles of instrumentation and applications.

UNIT V NANOCHEMISTRY

9

Introduction to nanochemistry – preparations and properties of nanomaterials - nanorods – nanowires – nanotubes – carbon nanotubes and their applications – nanocomposites – sensors and electronic devices – nanochemistry in biology and medicines –nanocatalysis.

Total : 45

GE 9111 ENGINEERING GRAPHICS
(Common to All branches of B.E. / B.Tech. Programmes)

L T P C
2 0 3 4

Objectives:

To develop in students the graphic skills that would enable them to communicate the concepts, ideas and design of engineering products

To provide an exposure to the national/international standards related to technical drawings

INTRODUCTION

2

Importance of graphics in engineering applications – use of drafting instruments – BIS specifications and conventions – size, layout and folding of drawing sheets – lettering and dimensioning

UNIT-I FREE HAND SKETCHING OF ENGG OBJECTS AND CONSTRUCTION OF PLANE CURVES

3+9=12

Pictorial representation of engineering objects – representation of three dimensional objects in two dimensional media – need for multiple views – developing visualization skills through free hand sketching of three dimensional objects.

Polygons & curves used in engineering practice– methods of construction– construction of ellipse, parabola and hyperbola by eccentricity method – Cycloidal and involute curves- construction - drawing of tangents to the above curves.

UNIT-II ORTHOGRAPHIC PROJECTION: PROJECTION OF POINTS, LINES AND PLANE SURFACES

6+9=15

General principles of orthographic projection – first angle projection – layout of views – projections of points, straight lines located in the first quadrant – determination of true lengths of lines and their inclinations to the planes of projection – traces – projection of polygonal surfaces and circular lamina inclined to both the planes of projection

UNIT-III ORTHOGRAPHIC PROJECTION: PROJECTION OF SOLIDS AND SECTIONS OF SOLIDS

6+9=15

Projection of simple solids like prism, pyramid, cylinder and cone when the axis is inclined to one plane of projection –change of position & auxiliary projection methods- sectioning of above solids in simple vertical positions by cutting plane inclined to one reference plane and perpendicular to the other and above solids in inclined position with cutting planes parallel to one reference plane – true shapes of sections

UNIT-IV DEVELOPMENT OF SURFACES AND INTERSECTION OF SOLIDS

6+9=15

Need for development of surfaces – development of lateral surfaces of simple and truncated solids – prisms, pyramids, cylinders and cones – development of lateral surfaces of the above solids with square and circular cutouts perpendicular to their axes. Intersection of solids and curves of intersection –prism with cylinder, cylinder & cylinder, cone & cylinder with normal intersection of axes and with no offset.

UNIT-V ISOMETRIC AND PERSPECTIVE PROJECTIONS**4+9=13**

Principles of isometric projection – isometric scale – isometric projections of simple solids, truncated prisms, pyramids, cylinders and cones – principles of perspective projections – projection of prisms, pyramids and cylinders by visual ray and vanishing point methods.

COMPUTER AIDED DRAFTING (DEMONSTRATION ONLY**3**

Introduction to computer aided drafting software packages and demonstration of their use.

L=30 P=45 Total: 75 Periods**TEXT BOOKS**

1. Bhatt,N.D, “Engineering Drawing”, Charotar Publishing House, 46th Edition-2003
2. Natarajan,K.V, “ A Textbook of Engineering Graphics”, Dhanalakshmi Publishers, Chennai, 2006 .

REFERENCE BOOKS

1. Shah,M.B and Rana,B.C.,”Engineering Drawing”, Pearson Education,2005,
2. Gopalakrishnan.K.R., “Engineering Drawing I & II”, Subhas Publications 1998.
3. Dhananjay,A.J., “Engineering Drawing with Introduction to AutoCAD”, Tata McGraw-Hill Publishing Company Ltd., 2008.
4. Venugopal,K. and Prabhu Raja, V., “Engineering Graphics”, New Age International(P) Ltd.,2008.

Codes from Bureau of Indian Standards

1. IS 10711-2001: Technical Products Documentation – Size and Layout of Drawing Sheets
2. IS 9609 (Parts 0 & 1)-2001: Technical Products Documentation – Lettering
3. IS 10714(Part 20)-2001 & SP 46 -2003: Lines for Technical Drawings
4. IS 11669-1986 & SP 46-2003: Dimensioning of Technical Drawings
IS 15021(Parts 1 to 4)-2001: Technical Drawings-Projection Methods

Special points applicable to University Examinations on Engineering Graphics:

1. There will be five questions one from each unit covering all units of the syllabus
2. All questions will carry equal marks of 20 each making a total of 100
3. Answer paper shall consist of drawing sheets of A3 size only. The students will be permitted to use appropriate scale to fit solutions within A3 size
4. The examination will be conducted in appropriate sessions on the same day

GE 9112 FUNDAMENTALS OF COMPUTING (Common to all branches of B.E. / B.Tech. Programmes)

L T P C
3 0 0 3

Aim:

To introduce the basics of computing and the fundamentals of C programming.

Objectives:

- To introduce the fundamentals of computing systems.
- To introduce the concepts of internet and WWW.
- To teach programming in C.

UNIT I

9

Computer systems – Exploring computers – Inside the system – Processing data – CPUs – Types of storage devices - Operating systems basics – Networking basics.

UNIT II**9**

The internet and the WWW – Internet services – connecting to the internet - Working with applications software – productivity software – graphics and multimedia – Data base Management systems – Creating computer program.

UNIT III**9**

C programming fundamentals – compilation process – variables – Data types – Expressions – looping – decisions.

UNIT IV**9**

Arrays - Working with functions – structures – character strings – pre processor.

UNIT V**9**

Pointers – Dynamic memory allocation – linked list - Applications

Total: 45 Periods**TEXT BOOKS:**

1. Peter Norton, “Introduction to Computers”, Sixth Edition, Tata McGraw Hill, 2007.
2. Stephen G. Kochan, “Programming in C”, Third Edition, Pearson Education, 2007.

PH 9112 PHYSICS LABORATORY

(Common to ALL Branches of B.E. / B.Tech. Programmes)

L T P C
0 0 2 1

1. Torsional Pendulum- Determination of rigidity modulus of wire and moment of Inertia of disc.
2. Non-uniform bending - Determination of Young's modulus.
3. Lees' disc- Determination of thermal conductivity of a bad conductor.
4. Potentiometer - Determination of thermo e.m.f of thermocouple
5. Air wedge- Determination of thickness of a thin sheet of paper.
6. i. Optical fibre - Determination of Numerical Aperture and acceptance angle
ii. Compact disc - Determination of width of the groove using laser.
7. Acoustic grating - Determination of velocity of ultrasonic waves in liquids.
8. Post office box - Determination of Band gap
9. Spectrometer - Determination of wavelength using grating
10. Viscosity of liquid- Determination of co-efficient of viscosity of a liquid by Poiseuille's flow.

Total: 30 Periods

CY9112 CHEMISTRY LABORATORY
(Common to all branches of Engineering and Technology)

L T P C
0 0 2 1

I. WEIGHING AND PREPARATION OF STANDARD SOLUTIONS

- i) Preparation of molar and normal solutions of the following substances oxalic acid, sodium carbonate, sodium hydroxide, and hydrochloric acid.
- ii) Preparation of buffer solutions: borate buffer, phosphate buffer using Henderson equation.

2. WATER ANALYSIS

- i) Determination of total hardness, temporary & permanent hardness of water by EDTA method.
- i) Determination of DO content by Winkler's method.
- ii) Determination of alkalinity in a water sample.
- iii) Determination of chloride content of water sample by argentometric method.

3. PH-METRY

To find out the strength of given hydrochloric acid by sodium hydroxide.

4. CONDUCTOMETRY

- i) Conductometric titration of mixture of acids
- ii) Conductometric precipitation titration using BaCl_2 - Na_2SO_4

5. POTENTIOMETRY

- i) Redox titration – Iron Vs. dichromate

6. SPECTROPHOTOMETRY

- i) To determine λ_{max} of a colored solution such as potassium permanganate.

- ii) To determine the iron content of an unknown solution (1,10- phenanthroline/ thiocyanate method)

7. FLAME PHOTOMETRY

- i) To determine sodium and potassium in water.

8. VISCOMETRY

- i) Determination of molecular weight of a polymer

9. WATER POLLUTION

- i) COD analysis of a waste water by dichromate method.

10. KINETICS

- i) Determination of reaction rate constant of acid catalyzed hydrolysis of ester.

11. ADSORPTION

- i) Adsorption of acetic acid on activated charcoal.

Total: 30 Periods

REFERENCE BOOKS

1. A text of quantitative Inorganic Analysis, A. L. Vogel , ELBS London. 1995.
2. Experiments in physical chemistry, D.P. Shoemaker and C.W. Gardad, McGraw Hill, London, 2001.

GE 9113 ENGINEERING PRACTICES LABORATORY
(Common to all Branches of B.E. / B.Tech. Programmes)

L T P C
0 0 3 2

OBJECTIVE

To provide exposure to the students with hands-on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.

GROUP – A (CIVIL & ELECTRICAL)

1. CIVIL ENGINEERING PRACTICE

12

Plumbing

Basic pipe connections involving the fittings like valves, taps, coupling, unions, reducers, elbows and other components used in household fittings. Preparation of plumbing line sketches.

Laying pipe connection to the suction side of a pump – inlet.

Laying pipe connection to the delivery side of a pump – out let.

Practice in mixed pipe connections: Metal, plastic and flexible pipes used in household appliances.

Wood Work

Sawing, planing and making common joints: T-Joint, Mortise and Tennon joint, Dovetail joint.

Study

Study of joints in door panels, wooden furniture

Study of common industrial trusses using models.

2. ELECTRICAL ENGINEERING PRACTICE 9

Basic household wiring using switches, fuse, indicator – lamp etc.,

Preparation of wiring diagrams

Stair case light wiring

Tube – light wiring

Study of iron-box, fan with regulator, emergency lamp

GROUP – B (MECHANICAL AND ELECTRONICS) 15

3. MECHANICAL ENGINEERING PRACTICE

Welding

Arc welding of butt joints, lap joints, tee joints

Gas welding Practice.

Basic Machining

Simple turning, drilling and tapping operations.

Machine assembly Practice.

Study and assembling the following:

Centrifugal pump, mixies and air conditioners.

Demonstration on

(a) Smithy operations like the production of hexagonal bolt.

(b) Foundry operation like mould preparation for grooved pulley.

4. ELECTRONIC ENGINEERING PRACTICE

9

Soldering simple electronic circuits and checking continuity.

Assembling electronic components on a small PCB and testing.

Study of Telephone, FM radio, low-voltage power supplies.

Total: 45 Periods

GE 9114 COMPUTER PRACTICE LABORATORY
(Common to all branches of B.E. / B.Tech. Programmes)

L T P C
0 0 3 2

Aim:

The aim is to teach the use of computer applications related to office automation and to teach implementation of C programs.

Objectives:

- To introduce office automation software packages.
 - To teach the fundamentals in C programming.
-
1. Simple OS commands and simple editors for file operations.
 2. Word processors for more complex operations, like formatting documents, creating tables and so on.
 3. Simple data base packages for creating and manipulating databases.
 4. Spread sheet packages for data preparation and analysis.
 5. Preparation of reports involving mathematical functions (Income Tax Statement, Mark sheets, Payroll etc.,)
 6. C Programs using one dimensional arrays.
 7. C Programs using multi-dimensional arrays and pointer data types.

8. Programs using structures, nested structures and union.
9. Programs using functions- recursive, non-recursive and Library functions.
10. Programs for passing aggregate data types as parameters between functions.
11. Programs for dynamic memory allocation / deallocation.
12. Programs for self-referential structure – Implementing linked list.

Total: 45 Periods

HS 9161 TECHNICAL ENGLISH II
(For all branches of B.E. / B.Tech. Programmes)

L T P C
2 0 2 3

Aim:

To help students specialising in the field of Engineering and Technology develop their proficiency in oral and written communication in Technical English.

Objectives:

1. To enable students develop their critical thinking skills.
2. To enable students develop higher order reading skills such as interpreting, evaluating and analysing.
3. To enable students develop their active listening skills.
4. To enable students participate successfully in Group Discussions.

UNIT I

6

Word formation using prefixes ‘self’ – modified cloze – contextual meanings - Sequencing words - future simple passive form - Predicting content – Intensive reading – interpreting advertisements – Listening and completing table – Writing extended definition – describing a process using sequence words – developing ideas into paragraphs – writing about the future.

UNIT II

6

Identifying objects and their use – word puzzles using words with suffixes – Prepositions – adverbs – structures that express purpose - adjectives – group discussion – Reading - skimming

for content and analysis of style – modes of non verbal communication – Listening and categorising data in tables – Writing formal letter – writing paragraphs on various issues.

UNIT III

6

Stress and intonation - Cause and effect expressions - Tense forms - simple past and past continuous - Different grammatical forms of the same word - Critical reading - guided note-making and evaluating content - Listening – guided note-taking – completing a table – Role-play – group discussion techniques - discussing an issue – offering suggestions – Sequencing jumbled sentences using coherence markers– Writing a report – Writing recommendations – Writing a letter of complaint.

UNIT IV

6

Numerical adjectives - Prepositions – use of intensifying prefixes – phrasal verbs - different grammatical forms of the same words – cloze exercise - Reading a text and evaluating the content - advertisements – analysing style and language - Listening and entering classified information – Intensive listening and completing the steps of a process - Role-play - Group discussion expressing opinions and convincing (agreeing and disagreeing) - Giving oral instructions – Descriptive writing - writing based on hints – writing argumentative paragraphs – formal letter writing – letter of application with biodata / CV Writing safety instructions - warnings and notices – preparing checklist – email communication.

UNIT V

6

Identifying problems, their causes and finding solutions using case studies – creative and critical thinking – levels of thinking – thinking strategies – brainstorming - analytical reasoning skills – evaluative essay – decision making – conflict resolution

English Language Lab

(30 Periods)

1. Listening: (10)

Recognising English sounds – accents - listening & answering questions - gap filling - listening & note making - listening to telephonic conversations - listening to speeches.

2. Speaking: (10)

Pronouncing words & sentences correctly - word stress - conversation practice.

3. Reading: (5)

Cloze test - Reading and answering questions - sequencing of sentences.

4. Writing: (5)

Correction of errors - Blogging.

Total – 60 Periods

TEXTBOOK

1. Department of Humanities & Social Sciences, Anna University. **English for Engineers and Technologists**, Combined edition Vols. I & II. Chennai: Orient Longman, Pvt. Ltd. 2006, Themes 5 to 8 (for Units 1 – 4)
2. Sunita Mishra & C. Muralikrishna, **Communication Skills for Engineers**, Pearson Education, Second Impression, 2007. (for Unit 5)

REFERENCE BOOKS

4. Website: www.englishclub.com

LAB REQUIREMENTS

1. Teacher – Console and systems for students
2. English Language Lab Software
3. Tape Recorders

MA 9161 MATHEMATICS - II

(Common to all branches of B.E. / B.Tech Programmes)

L T P C

3 0 0 3

Aim:

To introduce the effective mathematical tools needed for solving engineering problems and to emphasize the underlying mathematical principles in specific situations confronting practicing engineers.

Objectives:

- To make the student acquire sound knowledge of techniques in solving ordinary differential equations that model engineering problems
- To acquaint the student with the concepts of vector calculus, needed for problems in all engineering disciplines

- To develop an understanding of the standard techniques of complex variable theory so as to enable the student to apply them with confidence, in application areas such as heat conduction, elasticity, fluid dynamics and flow the of electric current
- To make the student appreciate the purpose of using transforms to create a new domain in which it is easier to handle the problem that is being investigated

UNIT I DIFFERENTIAL EQUATIONS

9+3

Method of variation of parameters – Method of undetermined coefficients – Homogenous equation of Euler’s and Legendre’s type – System of Simultaneous linear differential equations with constant coefficients.

UNIT II VECTOR CALCULUS

9+3

Gradient and directional derivative – Divergence and Curl – Irrotational and Solenoidal vector fields – Line integral over a plane curve – Surface Integral and Volume Integral - Green’s, Gauss divergence and Stoke’s theorems – Verification and Application in evaluating line, surface and volume integrals.

UNIT III ANALYTIC FUNCTION

9+3

Analytic functions – Necessary and sufficient conditions for analyticity - Properties – Harmonic conjugates – Construction of analytic function - Conformal Mapping – Mapping by functions

$w = z+c$, az , $\frac{1}{z}$, z^2 - Bilinear transformation.

UNIT IV COMPLEX INTEGRATION

9+3

Line Integral - Cauchy’s theorem and integral formula – Taylor’s and Laurent’s Series – Singularities – Residues – Residue theorem – Application of Residue theorem for evaluation of real integrals – Use of circular contour and semicircular contour with no pole on real axis.

UNIT V LAPLACE TRANSFORMS

9+3

Existence conditions – Transforms of elementary functions – Basic properties – Transforms of derivatives and integrals – Initial and Final value theorems – Inverse transforms – Convolution theorem – Transform of periodic functions – Application to solution of linear ordinary differential equations with constant coefficients.

PH9168 PHYSICS FOR COMMUNICATION ENGINEERING

(Common to Electronics and Communication Engg., Computer Science and Engg. and
Information Technology)

L	T	P	C
3	0	0	3

OBJECTIVE:

To introduce the essential principles of physics for communication and related engineering applications.

1. Electrical properties of metals

9

Classical theory: Drude model - thermal conductivity, thermal resistance - electrical conductivity of nonmetals: semiconductors, ionic crystals and glasses - thin metal films: conductivity and resistivity - Schrödinger wave equation – particle in a box – degenerate states – Fermi-Dirac statistics – density of states: electron concentration and Fermi Level - band theory of solids: energy band formation – electron effective mass.

2. Semiconductors

9

Intrinsic semiconductors: energy band-diagram - direct and indirect band gap semiconductors - carrier concentrations and conductivity - extrinsic semiconductors: n, p-type doping, compensation doping - temperature dependence of conductivity - degenerate and nondegenerate semiconductors - recombination and minority carrier injection: direct and indirect recombination - minority carrier lifetime - diffusion and conduction equations and random motion - continuity equation: time-dependent continuity equation, steady-state continuity equation - optical absorption - Hall effect and devices - Ohmic contacts - Schottky diode and solar cell.

3. Display Devices

9

Photoluminescence, cathodoluminescence, electroluminescence, injection luminescence – plasma displays - LED construction and working – organic LEDs – principles of quantum well laser – liquid crystals and LCD construction and working – numeric displays

4. Magnetic/Optical Data Storage Techniques

9

Introduction – magnetic material parameters – magnetic disk memories – optical data storage – phase change recording – magneto-optical data storage – Hi-tech involved in

system development – capacity of CD in normal use – advantages of CD – holographic storage – construction of a hologram – reconstruction of a hologram – photorefractive storage.

5.Fabrication Process Using Semiconductors and Dielectric

9

Bulk crystal growth, Epitaxial growth, masking and etching, Diffusion of impurities, selective diffusion, Formation of PN junction, resistors, capacitors, inductors, Isolation methods, metal semiconductor contact. Introduction to integrated circuit – Definition of LSI, MSI, VLSI circuits monolithic and hybrid circuits, Thin film and thick film technology.

GE 9151 ENGINEERING MECHANICS

(Common to Civil, Geoinformatics and Agriculture & Irrigation Engineering)

L T P C
3 1 0 4

OBJECTIVE:

At the end of this course the student should be able to understand the vectorial and scalar representation of forces and moments, static equilibrium of particles and rigid bodies both in two dimensions and also in three dimensions. Further, the student should understand the principle of work and energy. The student should be able to comprehend the effect of friction on equilibrium. The student should be able to understand the laws of motion, the kinematics of motion and the interrelationship. The student should also be able to write the dynamic equilibrium equation. All these should be achieved both conceptually and through solved examples.

UNIT I BASICS & STATICS

12

Introduction - Units and Dimensions - Laws of Mechanics – Lame’s theorem, Parallelogram and triangular Law of forces – Vectors – Vectorial representation of forces and moments – Vector operations on forces, dot product and cross product - Coplanar Forces – Resolution and Composition of forces – Equilibrium of a forces – Forces in space - Equilibrium in space - Equivalent systems of forces – Principle of transmissibility – Single equivalent force

UNIT II EQUILIBRIUM OF RIGID BODIES

12

Free body diagram – Types of supports and their reactions – requirements of stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis – Vectorial representation of moments and couples – Scalar components of a moment – Varignon’s theorem - Equilibrium of Rigid bodies in two dimensions – Equilibrium of Rigid bodies in three dimensions – Examples

UNIT III PROPERTIES OF SURFACES AND SOLIDS

12

Determination of Areas and Volumes – First moment of area and the Centroid of standard sections – T section, I section, Angle section, Hollow section – second and product moments of plane area – Rectangle, triangle, circle - T section, I section, Angle section, Hollow section – Parallel axis theorem and perpendicular axis theorem – Polar moment of inertia – Principal moments of inertia of plane areas – Principal axes of inertia - Mass moment of inertia – Derivation of mass moment of inertia for rectangular solids, prism, rods, sphere from first principle – Relation to area moments of inertia.

UNIT IV DYNAMICS OF PARTICLES

12

Displacements, Velocity and acceleration, their relationship – Relative motion – Curvilinear motion – Newton’s law – Work Energy Equation of particles – Impulse and Momentum

UNIT V CONTACT FRICTION AND ELEMENTS OF RIGID BODY DYNAMICS

12

Frictional force – Laws of Coloumb friction – simple contact friction – Rolling friction – Belt friction Translation and Rotation of Rigid Bodies – Velocity and acceleration – General Plane motion – Impact of elastic bodies

EC 9161 ELECTRONIC DEVICES AND CIRCUITS

3 0 0 3

Unit I VOLTAGE AND CURRENT LAWS

9

Nodes, Paths, Loops, and Branches; Kirchoff's Current Law, Kirchoff's Voltage Law, Single Loop Circuit, Single Node-Pair Circuit, Series and Parellel Connected Independent Sources, Resistors in Series and Parellel, Voltage and Current Division

Unit II CIRCUIT ANALYSIS TECHNIQUES

9

Linearity and Superposition, Sources Transformation, Thevinin and Norton Equivalent Circuits, Maximum Power Transfer, Delta-Wye Conversion, Single Phase and 3 Phase Circuits-Power Factor-Power-Concept of Phasor Diagrams.

Unit III SEMICONDUCTOR DEVICES

9

PN-Junction Diode- Drift and Diffusion Current-Zener Diode-Zener Regulator-BJT-V-I Characteristics-CE Configuration-Current Equation h-Parameter Model.JFET- V-I Characteristics- Current Equation- Transconductance MOSFET-Types DMOS, EMOS – V-I Characteristics-Moll Current Equation Equalitine Treatment only.

Unit IV RECTIFIER, AMPLIFIER AND OSCILLATOR

9

FWR-Filter-Capacitors Input Filter-Choke Input Filter – CE Amplification with and without feedback – Analysis and Frequency Response – CS MOSFET Amplifier - Analysis

Unit V OPERATIONAL AMPLIFIER

9

Introduction of an Inverting Amplifier, Non Inverting Amplifier, Basic Application of Operation Amplifier: Subtractor, Summing Amplifier, Digital to Analogue nvertor, Low Pass Filter, First Order Low Pass Filter, First Order High Pass Filter, Integrator, Differentiator.

CS 9151 PROGRAMMING AND DATA STRUCTURES I 3 0 0 3

Aim:

The aim is to review the basics of C programming and to introduce the concepts of Data Structures.

Objectives:

- To introduce the basics of C programming language.
- To introduce the concepts of ADTs.
- To introduce the concepts of Hashing and Sorting.

UNIT I

8

Pr ogramming Style: Names – Expressions and Statements – Consistency and Idioms – Function Macros – Magic Numbers – Comments – Review of C Programming: Types, Operators and Expressions – Control Flow – Functions and Program Structure

UNIT II

8

C Programming: Pointers and Arrays – Structures – Input and Output - Files – Preprocessor.

UNIT III

10

Lists, Stacks, and Queues: Abstract Data Types (ADTs) – List ADT – Stack ADT – Queue ADT

UNIT IV**9**

Trees: Preliminaries – Binary Trees – Search Tree ADT – Binary Search Trees – Hashing: ADT – Hash Function – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing

UNIT V**10**

Sorting: Insertion Sort – Shell Sort – Heap Sort – Merge Sort – Quick Sort – External Sorting

Total: 45 Periods**TEXT BOOKS:**

MA9211 MATHEMATICS III**L T P C****(Common to all branches of BE / B.Tech Programmes)****3 1 0 4****AIM:**

To facilitate the understanding of the principles and to cultivate the art of formulating physical problems in the language of mathematics.

OBJECTIVES:

- To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems
- To acquaint the student with Fourier transform techniques used in wide variety of situations in which the functions used are not periodic
- To introduce the effective mathematical tools for the solutions of partial differential equations that model physical processes
- To develop Z- transform techniques which will perform the same task for discrete time systems as Laplace Transform, a valuable aid in analysis of continuous time systems

UNIT I FOURIER SERIES**9+3**

Dirichlet's conditions – General Fourier series – Odd and even functions – Half-range Sine and Cosine series – Complex form of Fourier series – Parseval's identity – Harmonic Analysis.

UNIT II FOURIER TRANSFORM**9+3**

Fourier integral theorem – Fourier transform pair-Sine and Cosine transforms – Properties – Transform of elementary functions – Convolution theorem – Parseval's identity.

UNIT III PARTIAL DIFFERENTIAL EQUATIONS**9+3**

Formation – Solutions of first order equations – Standard types and Equations reducible to standard types – Singular solutions – Lagrange's Linear equation – Integral surface passing through a given curve – Solution of linear equations of higher order with constant coefficients.

UNIT IV APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS **9+3**

Method of separation of Variables – Solutions of one dimensional wave equation and one-dimensional heat equation – Steady state solution of two-dimensional heat

equation – Fourier series solutions in Cartesian coordinates.

UNIT V Z – TRANSFORM AND DIFFERENCE EQUATIONS 9+3

Z-transform – Elementary properties – Inverse Z-transform – Convolution theorem – Initial and Final value theorems – Formation of difference equation – Solution of difference equation using Z-transform.

UNIT I ANALOG MODULATION 9

Amplitude Modulation – AM, DSBSC, SSBSC, VSB – PSD, modulators and demodulators – Angle modulation – PM and FM – PSD, modulators and demodulators – Superheterodyne receivers

UNIT II DIGITISATION 9

Low pass sampling theorem – Quantisation - PAM – Line coding - PCM, DPCM, DM, ADPCM and ADM, Channel Vocoder,– Time Division Multiplexing, frequency Division Multiplexing

UNIT III DIGITAL MODULATION AND TRANSMISSION 9

Phase shift keying – BPSK, DPSK, QPSK - Principles of M-ary signaling M-ary PSK & QAM – Comparison, ISI – Pulse shaping – Duo binary encoding - Cosine filters – Eye pattern, equalizers

UNIT IV INFORMATION THEORY AND CODING 9

Measure of information – Entropy – Source coding theorem - Shannon-Fano coding, Huffman Coding, LZ Coding– Channel capacity – Shannon-Hartley law – Shannon’s

limit- Error control Codes – Cyclic codes, Syndrome calculation – Convolutional Coding, Sequential and Viterbi decoding

UNIT V SPREAD SPECTRUM AND MULTIPLE ACCESS 9

PN sequences – properties – m-sequence –DSSS –Processing gain, Jamming – FHSS –Synchronisation and tracking - Multiple Access – FDMA, TDMA, CDMA

CS9202 DATABASE MANAGEMENT SYSTEMS

L T P C

3 0 0 3

AIM:

To provide a strong foundation in database technology and an introduction to the current trends in this field.

OBJECTIVES:

- To learn the fundamentals of data models and to conceptualize and depict a database system using ER diagram.
- To make a study of SQL and relational database design.
 - To understand the internal storage structures using different file and indexing techniques which will help in physical DB design.
- To know the fundamental concepts of transaction processing- concurrency control techniques and recovery procedure.

- To have an introductory knowledge about the Storage and Query processing techniques

UNIT I INTRODUCTION 9

Purpose of Database System — Views of data – Data Models – Database Languages — Database System Architecture – Database users and Administrator – Entity–Relationship model – E-R Diagrams -- Introduction to relational databases

UNIT II RELATIONAL MODEL 9

The relational Model – The catalog- Types– Keys - Relational Algebra – Domain Relational Calculus – Tuple Relational Calculus - Fundamental operations – Additional Operations- SQL fundamentals - Integrity – Triggers - Security – Advanced SQL features –Embedded SQL– Dynamic SQL- Missing Information– Views – Introduction to Distributed Databases and Client/Server Databases

UNIT III DATABASE DESIGN 9

Functional Dependencies – Non-loss Decomposition – Functional Dependencies – First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form- Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form

UNIT IV TRANSACTIONS 9

Transaction Concepts - Transaction Recovery – ACID Properties – System Recovery – Media Recovery – Two Phase Commit - Save Points – SQL Facilities for recovery – Concurrency – Need for Concurrency – Locking Protocols – Two Phase Locking – Intent Locking – Deadlock- Serializability – Recovery Isolation Levels – SQL Facilities for Concurrency

UNIT V IMPLEMENTATION TECHNIQUES 9

Overview of Physical Storage Media – Magnetic Disks – RAID – Tertiary storage – File Organization – Organization of Records in Files – Indexing and Hashing –Ordered Indices – B+ tree Index Files – B tree Index Files – Static Hashing – Dynamic Hashing – Query Processing Overview – Catalog Information for Cost Estimation – Selection Operation – Sorting – Join Operation – Database Tuning.

IT9201 COMPUTER ORGANIZATION

L T P C

3 1 0 4

AIM:

To understand the basics of digital design, the design of various components of the computer system and its organization.

OBJECTIVES:

- To understand the fundamentals of Boolean logic and functions.
- To design and realize these functions with basic gates, and other components using combinational and sequential logic.
- To understand the design and organization of a von-neumann computer system.
- To comprehend the importance of the hardware-software interface.

UNIT I DIGITAL FUNDAMENTALS

9 +3

Number systems and conversions – Boolean algebra and simplification – Minimization Of Boolean functions – Karnaugh map – Quine McCluskey tabulation method – Logic gates – NAND – NOR implementation.

UNIT II COMBINATIONAL AND SEQUENTIAL CIRCUITS

9 +3

Design of combinational circuits – Adder / Subtractor – Encoder – Decoder – Mux / Demux – Comparators – Flip Flops – Triggering – Master – Slave Flip Flop – State diagrams and minimization – Counters – Registers.

UNIT III BASIC STRUCTURE OF COMPUTERS

9 +3

Functional units – Basic operational concepts – Bus structures – Performance and metrics – Instructions and instruction sequencing – Hardware – Software Interface – Instruction set architecture – Addressing modes – RISC – CISC. ALU design – Fixed point and floating point operations.

UNIT IV PROCESSOR DESIGN

9 +3

Fundamental concepts – Execution of a complete instruction – Hardwired control – Micro programmed control. Pipelining – Basic concepts – Data hazards – Instruction hazards – Influence on instruction sets – Data path and control considerations – Performance considerations

9

UNIT V MEMORY AND I/O SYSTEMS

9 +3

Memory Technology – Memory hierarchy – Cache Memory – Design Methods – Virtual Memory – Input/Output System – Programmed I/O – DMA and Interrupts – Functions of I/O devices and interfaces.

CS9201 DESIGN AND ANALYSIS OF ALGORITHMS

L T P C

3 0 0 3

AIM:

The aim is to introduce the basics of algorithm design paradigms and analysis to enable designing of efficient algorithms.

OBJECTIVES:

- To introduce the basic concepts of algorithm analysis
- To introduce the design paradigms for algorithm design
- To introduce the basic complexity theory.

UNIT I

9

The Role of Algorithms in Computing-Getting Started-Growth of Functions – Recurrences-The Substitution Method- The Recurrence Tree Method-The Master Method -Probabilistic Analysis and Randomized Algorithms-The Hiring Problem-Random Variables-Randomized Algorithms.

UNIT II

9

Quicksort-Description-Performance-Randomized version-Analysis.Sorting in linear time-Lower bounds for sorting-Counting sort-Medians and order statistics-Minimum and maximum-Selection in expected linear time- Selection in worst-case linear time-

Dynamic Programming – Matrix chain multiplication –Elements of Dynamic programming- Longest common sequences.

11

UNIT III **9**

Greedy Algorithms-Activity selection problem-Elements of Greedy Strategy-Huffman code.Matrix Operations-Properties of matrices-Strassen's algorithm-Solving systems of linear equations-Inverting matrices.

UNIT IV **9**

Linear Programming-Standard and slack forms-Formulating problems-Simplex algorithm-Duality-Initial basic feasible solution - String Matching-Naive string matching algorithm-Knuth-Morris-Pratt algorithm.

UNIT V **9**

NP-completeness-Polynomial time-Polynomial-time verification-NP-completeness and reducibility-NP-completeness proofs - NP-completeness problems. Approximation Algorithms-The vertex-cover problem-The traveling-salesman problem.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Thomas H.Cormen, Charles E.Leiserson, Ronald L.Rivest, Clifford Stein, “Introduction to Algorithms”, Second Edition, Prentice Hall of India, 2007.

CS9205 DBMS LAB

L T P C

0 0 3 2

EXPERIMENTS IN THE FOLLOWING TOPICS:

1. Data Definition, Manipulation of base tables and views
2. High level programming language extensions.

3. Front end tools
4. Forms
5. Triggers
6. Menu Design
7. Importing/ Exporting Data
8. Reports.
9. Database Design and implementation (Mini Project).

TOTAL: 45 PERIODS

12

CS9206 PROGRAMMING AND DATA STRUCTURES LAB II L T P C

0 0 3 2

EXPERIMENTS IN THE FOLLOWING:

1. Data abstraction, Implementation of any one of the following List, Stack, Queue ADTs, using Header files, Separate compilation of implementation and application. Search ADT, Binary Search Tree., Header files, Separate compilation.
2. Use of Standard Template Library: Strings, Containers
3. Use of STL: Iterators
4. Operator Overloading
5. Templates,
6. Exception handling, Class Hierarchies
7. AVL Tree
8. Splay Tree
9. B Tree
10. Graph algorithms

TOTAL:45 PERIODS

CS9207 ALGORITHMS LAB

L T P C

0 0 3 2 1.

Implementing simple recursive programs like Towers of Hanoi ,Generating Permutations.

2. Implementation of simple sort algorithms.
3. Implementation of randomized quicksort algorithms.
4. Implementation of algorithms like merge sort using Divide and Conquer approach.
5. Implementation of Huffman code using Greedy Approach.
6. Implementation of Dynamic Programming – Floyd's Algorithm.
7. Solving Simplex Method.
8. Implement String matching algorithms.
9. Implementation of programs Study of Benchmarking and analysis of Algorithms for simple programs.
10. Study of Algorithms Tools like LEDA (Library of Efficient Data types and Algorithms).

TOTAL: 45 PERIODS

13

MA9265 DISCRETE MATHEMATICS

L T P C

3 1 0 4

AIM:

To extend student's Logical and Mathematical maturity and ability to deal with abstraction and to introduce most of the basic terminologies used in computer science courses and application of ideas to solve practical problems.

OBJECTIVES:

At the end of the course, students would

- Have knowledge of the concepts needed to test the logic of a program.
- Have an understanding in identifying structures on many levels.
- Be aware of a class of functions which transform a finite set into another finite set which relates to input output functions in computer science.
- Be aware of the counting principles
- Be exposed to concepts and properties of algebraic structures such as semi groups, monoids and groups.

UNIT I LOGIC AND PROOFS

12

Propositional Logic – Propositional equivalences-Predicates and quantifiers – Nested Quantifiers – Rules of inference-introduction to proofs – proof methods and strategy.

UNIT II COMBINATORY **12**

Mathematical induction – Strong induction and well ordering – The basics of counting - The pigeonhole principle – Permutations and combinations – Recurrence relations- Solving linear recurrence relations-generating functions – Inclusion and exclusion and applications.

UNIT III GRAPHS **12**

Graphs and graph models – Graph terminology and special types of graphs – Representing graphs and graph isomorphism – connectivity – Euler and Hamilton paths.

UNIT IV ALGEBRAIC STRUCTURES **12**

Algebraic systems – Semi groups and monoids – Groups-Subgroups and homomorphisms – Cosets and Lagrange’s theorem – Ring & Fields.

UNIT V LATTICES AND BOOLEAN ALGEBRA **12**

Partial ordering – Posets – Lattices as Posets – Properties of lattices-Lattices as algebraic systems – Sub lattices – direct product and Homomorphism – Some special lattices – Boolean algebra

IT9251 FORMAL LANGUAGES AND AUTOMATA

L T P C

3 0 0 3

AIM:

To get fundamental idea on Automata and Languages

OBJECTIVES:

- A study of the formal relationships between machines, languages and grammar.

UNIT I AUTOMATA 9

Introduction to formal proof – Additional forms of proof – Inductive proofs – Finite Automata (FA) – Deterministic Finite Automata (DFA) – Non-deterministic Finite Automata (NFA) – Finite Automata with Epsilon transitions.

UNIT II REGULAR EXPRESSIONS AND LANGUAGES 9

Regular Expression – FA and Regular Expressions – Proving languages not to be regular – Closure properties of regular languages – Equivalence and minimization of Automata.

UNIT III CONTEXT - FREE GRAMMARS AND LANGUAGES 9

Context-Free Grammar (CFG) – Parse Trees – Ambiguity in grammars and languages – Definition of the Pushdown automata – Languages of a Pushdown Automata – Equivalence of Pushdown automata and CFG – Deterministic Pushdown Automata.

UNIT IV PROPERTIES OF CONTEXT-FREE LANGUAGES 9

Normal forms for CFG – Pumping Lemma for CFL – Closure Properties of CFL – Turing Machines – Programming Techniques for TM.

UNIT V DETERMINISTIC PARSING 9

Parsing : The graph of a grammar – A top-down parser – Reductions and Bottom-up Parsing – A Bottom-up Parser – LL(k) Grammars : Lookahead in CFG – FIRST, FOLLOW, Lookahead sets – Strong LL(k) Grammars – Construction of FIRST_k, FOLLOW_k sets – LR(k) Grammars : LR(0) contexts – An LR(0) Parser – LR(0) Machine.

TOTAL:45 PERIODS

TEXT BOOKS:

1. J.E. Hopcroft, R. Motwani and J.D. Ullman, “Introduction to Automata Theory, Languages and Computations”, second Edition, Pearson Education, 2003.
2. Thomas A. Sudukamp, “An Introduction to the Theory of Computer Science, Languages and Machines”. 3rd Edition, Pearson Education, 2007.

3. Micheal Sipser, “Introduction of the Theory and Computation”, Thomson Brokecole, 1997.

IT9252 EMBEDDED SYSTEMS

L T P C

3 0 0 3

AIM:

To understand hardware and the software aspects of embedded systems.

OBJECTIVES:

- To understand the architecture of embedded processors, microcontrollers, and peripheral devices.
- To appreciate the nuances of programming micro-controllers in assembly for embedded systems.
- To understand the challenges in developing operating systems for embedded systems.
- To learn about programming these systems in high-level languages such as C.

UNIT I EMBEDDED COMPUTING

9

Challenges of Embedded Systems – Embedded system design process. Embedded processors – 8051 Microcontroller, ARM processor – Architecture, Instruction sets and programming.

UNIT II MEMORY AND INPUT / OUTPUT MANAGEMENT

9

Programming Input and Output – Memory system mechanisms – Memory and I/O devices and interfacing – Interrupt handling.

UNIT III PROCESSES AND OPERATING SYSTEMS 9

Multiple tasks and processes – Context switching – Scheduling policies – Interprocess communication mechanisms – Performance issues.

UNIT IV EMBEDDED C PROGRAMMING 9

Programming embedded systems in C – C-looping structures – Register allocation – Function calls – Pointer aliasing – structure arrangement – bit fields – unaligned data and endianness – inline functions and inline assembly – portability issues.

UNIT V EMBEDDED SYSTEM DEVELOPMENT 9

Meeting real time constraints – Multi-state systems and function sequences.

Embedded software development tools – Emulators and debuggers. Design issues – Design methodologies – Case studies – Complete design of example embedded systems.

TOTAL: 45 PERIODS

16

TEXT BOOKS

1. Wayne Wolf, “Computers as Components:Principles of Embedded Computer System Design”, Elsevier, 2006.
2. Muhammed Ali Mazidi, Janice Gillispie Mazidi and Rolin D. McKinlay, “The 8051 Microcontroller and Embedded Systems”, Pearson Education, Second edition, 2007 (unit 1)
3. Andrew N Sloss, D. Symes, C. Wright, ” Arm system developers guide”, Morgan Kauffman/ Elsevier, 2006. (unit 4)

REFERENCES

1. Michael J. Pont, “Embedded C”, Pearson Education , 2007.
2. Steve Heath, “Embedded System Design”, Elsevier, 2005.

AIM:

The course introduces the students to the basic principles of operating systems.

OBJECTIVES:

- To be aware of the evolution of operating systems
- To learn what processes are, how processes communicate, how process synchronization is done and how to manage processes
- To have an understanding of the main memory and secondary memory management techniques.
- To understand the I/O Subsystem
- To have an exposure to Linux and Windows 2000 operating systems

UNIT I OPERATING SYSTEMS OVERVIEW 9

Operating system – Types of Computer Systems – Computer-system operation – I/O structure – Hardware Protection – System components – System calls – System programs – System structure – Process concept – Process scheduling – Operations on processes – Cooperating processes – Interprocess communication – Communication in client-server systems – Multithreading models – Threading issues – Pthreads.

UNIT II PROCESS MANAGEMENT 10

Scheduling criteria – Scheduling algorithms – Multiple-processor scheduling – Real time scheduling – Algorithm Evaluation – Process Scheduling Models - The criticalsection problem – Synchronization hardware – Semaphores – Classic problems of synchronization – Critical regions – Monitors – System model – Deadlock characterization – Methods for handling deadlocks – Recovery from deadlock

UNIT III STORAGE MANAGEMENT 9

Memory Management – Swapping – Contiguous memory allocation – Paging – Segmentation – Segmentation with paging. Virtual Memory: Background – Demand paging – Process creation – Page replacement – Allocation of frames – Thrashing.

17**UNIT IV I/O SYSTEMS 9**

File concept – Access methods – Directory structure – File-system mounting – Protection – Directory implementation – Allocation methods – Free-space management – Disk scheduling – Disk management – Swap-space management.

UNIT V CASE STUDY

8

The Linux System – History – Design Principles – Kernel Modules – Process Management – Scheduling – Memory management – File systems – Input and Output – Inter-process Communication – Network Structure – Security – Windows 2000 – History – Design Principles – System Components – Environmental subsystems – File system – Networking.

TOTAL: 45 PERIODS

CS9253 WEB TECHNOLOGY L T P C

3 0 0 3

AIM:

To provide an introduction to Java and basic Web concepts and enable the student to create simple Web based applications.

OBJECTIVES:

- To introduce the features of object oriented programming languages using Java
- To design and create user interfaces using Java frames and applets
- To have a basic idea about network programming using Java
- To create simple Web pages and provide client side validation
- To create dynamic web pages using server side scripting

UNIT I	9
Java fundamentals – Class, Object – Inheritance – Polymorphism – Packages – Interfaces – Exception handling	
UNIT II	9
I/O – AWT – Event handling – Introduction to Threads - Basics of Networking – TCP and UDP sockets – Connecting to the Web	
18	
UNIT III	9
Applets – JDBC – Swings – Remote Method Invocation	
UNIT IV	9
World Wide Web – HTML – List –Tables – Frames – Forms – HTTP commands – XML – DTD, Schema – XSLT – XML Parser – Client side scripting	
UNIT V	9
Server side scripting – JSP – Servlets – Session management – Cookies	

TOTAL:45 PERIODS

TEXT BOOKS

1. Deitel and Deitel, “Java – How to program”, 3rd ed., Pearson Education, 2001.
2. Robert W. Sebesta, “Programming the World Wide Web”, 3rd ed.,Pearson Education, 2006. (Units 4,5)

REFERENCES

1. Herbert Schildt, “Java – The Complete Reference”, 7th ed., Tata McGraw Hill, 2007.
2. Chris Bates, “Web Programming”, 3rd ed., Wiley, 2006.
3. Black Book, “Java 6 Programming”, Dreamtech Press, 2007.
4. Deitel, “Java How to Program”, Pearson Education, 2003.
5. W Clay Richardson, et al, “Professional Java JDK 6 Edition”, Wrox, 2007.

AIM:

The course is intended to give Software Engineering principles in classical sense.

OBJECTIVES:

- To be aware of a member of generic models to structure the software development process.
- To understand fundamental concepts of requirements engineering and requirements specification.
- To understand different notion of complexity at both the module and system level
- To be aware of some widely known design methods.
- To understand the role and contents of testing activities in different life cycle phases.

UNIT I**9**

The Evolving role of Software – Software – The changing Nature of Software – Legacy software —A generic view of process– A layered Technology – A Process Framework – The Capability Maturity Model Integration (CMMI) – Process Assessment – Personal and Team Process Models. Product and Process. Process Models – The Waterfall Model – Incremental Process Models – Incremental Model – The RAD Model – Evolutionary Process Models – Prototyping – The Spiral Model – The Concurrent Development Model – Specialized Process Models – the Unified Process.

19**UNIT II****9**

Software Engineering Practice – communication Practice – Planning practice Modeling practice– Construction Practice –Deployment. Requirements Engineering - Requirements Engineering tasks – Initiating the requirements Engineering Process- Eliciting Requirements – Developing Use cases – Building the Analysis Models – Elements of the Analysis Model – Analysis pattern – Negotiating Requirements – Validating Requirements.

UNIT III**9**

Requirements Analysis – Analysis Modeling approaches – data modeling concepts –

Object oriented Analysis – Scenario based modeling – Flow oriented Modeling – Class based modeling – creating a behaviour model.

UNIT IV **9**

[Design Engineering – Design process -Design Quality-Design model-User interface Design – Testing strategies- strategies Issues for conventional and object oriented software-validation testing –system testing –Art of debugging – Project management

UNIT V **9**

Software evolution - Verification and Validation -Critical Systems Validation – Metrics for Process, Project and Product-Quality Management -Process Improvement –Risk Management- Configuration Management

IT9301 SOFTWARE PROJECT MANAGEMENT

L T P C

3 0 0 3

AIM

This course aims at the role of software developers in getting exposure on planning and controlling aspect of software development

OBJECTIVES

- To understand the roles of the project manager
- To understand the threats and opportunities in project management
- To gain Expertise in size, effort and cost estimation techniques
- To understand the techniques available with which a project's aims and objectives, timetable, activities, resources and risks can be kept under control
- To understand the social and political problems a project will encounter--against which the technical problems pale into insignificance--and to begin to understand how to approach non-technical problems

- To Appreciate of other management issues like team structure, group dynamics

- To understand communication

UNIT I INTRODUCTION TO SOFTWARE PROJECT MANAGEMENT 9

Project Definition – Contract Management – Activities Covered by Software Project Management – Overview Of Project Planning – Stepwise Project Planning.

UNIT II PROJECT EVALUATION 9

Strategic Assessment – Technical Assessment – Cost Benefit Analysis – Cash Flow Forecasting – Cost Benefit Evaluation Techniques – Risk Evaluation. – software effort estimation

UNIT III ACTIVITY PLANNING 9

Objectives – Project Schedule – Sequencing and Scheduling Activities – Network Planning Models – Forward Pass – Backward Pass – Activity Float – Shortening Project Duration – Activity on Arrow Networks – Risk Management – Nature Of Risk – Types Of Risk – Managing Risk – Hazard Identification – Hazard Analysis – Risk Planning and Control.

UNIT IV MONITORING AND CONTROL 9

Resource allocation - identifying and scheduling resources – publishing resource and cost schedule – scheduling sequence - Creating Framework – Collecting The Data – Visualizing Progress – Cost Monitoring – Earned Value – Prioritizing Monitoring – Getting Project Back To Target – Change Control – Managing Contracts – Introduction – Types Of Contract – Stages In Contract Placement – Typical Terms Of A Contract – Contract Management – Acceptance.

UNIT V MANAGING PEOPLE AND ORGANIZING TEAMS 9

Introduction – Understanding Behavior – Organizational Behaviour - Selecting The Right Person For The Job – Instruction In The Best Methods – Motivation – The Oldman – Hackman Job Characteristics Model – Working In Groups – Becoming A Team – Decision Making – Leadership – Organizational Structures – Stress – Health And Safety – Case Studies.

CS9301 OBJECT ORIENTED ANALYSIS AND DESIGN**L T P C 3 0 0 3****AIM:**

To study object oriented analysis and design and the techniques needed to apply them.

OBJECTIVES:

- To study the concepts of modelling in object oriented contexts
- To learn about the Object Constraint Language
- To study and learn how to apply analysis techniques and methodologies including

Use cases, System Sequence Diagrams

- To study and learn how to apply design techniques and methodologies including Interaction Diagrams, Class Diagrams

- To study implementation related issues

- To study and learn how to apply advanced techniques including Architectural Analysis and Design Patterns

UNIT I**8**

Introduction – Modelling as a design technique –UML diagrams- Class modeling –

Object Constraint Language – State modeling – Interaction Modeling

UNIT II **9**

Inception – Evolutionary Requirements – Use Cases – Other Requirements – Domain Models – System Sequence Diagrams – Operation Contracts

UNIT III **10**

Requirements to Design – Logical Architecture and UML Package Diagrams – Object Design – Interaction Diagrams – Class Diagrams – Designing Objects with Responsibilities – Object Design Examples – Designing for Visibility

UNIT IV **8**

Mapping designs to code – Test Driven development and refactoring – UML Tools and UML as blueprint

UNIT V **10**

More Patterns – Analysis update – Objects with responsibilities – Applying design patterns – Architectural Analysis – Logical Architecture Refinement – Package Design – Persistence framework with patterns

IT9302 MULTIMEDIA SYSTEMS

L T P C

3 0 0 3

AIMS

- Introduce students to the different media used in multimedia systems.
- Introduce students to the design issues related to multimedia systems.
- Introduce students to Multimedia networking concepts

OBJECTIVES

- Students will be able to handle all multimedia components efficiently.
- Students will be able to develop Integrated, Collaborative multimedia systems

UNIT I MULTIMEDIA ELEMENTS 9

Introduction – Definitions – Applications – Elements - Text – Image/Graphics
Audio – video – Animation.

UNIT II DATA AND FILE FORMATS 9

Compression Techniques – Lossless, Lossy – JPEG, MPEG, GIF, TIFF, RIFF- H.261,
H.262, H.263 -File formats - Display Technologies (Output) – Input

UNIT III MULTIMEDIA AUTHORIZING 9

Authoring tools - Inserting media elements on the Web Pages - Programming audio,
Video, Image using Java - open gl.

UNIT IV MULTIMEDIA STORAGE AND MANAGEMENT 9

Storage and Retrieval and presentation-Synchronization Issues - Multimedia
Operating Systems and Multimedia databases – Hypertext - Hypermedia
Architectures.

24

UNIT V MULTIMEDIA NETWORKS 9

Protocol - QOS Issues - RTP, RTCP, RTSP, SIP, Multimedia over ATM Networks -
Media on demand –ITV - STB Broad cast Schemes for VoD Buffer Management -
Multimedia over wireless networks.

TOTAL: 45 PERIODS

IT9303 COMPUTER NETWORKS

L T P C

3 0 0 3

AIM:

To understands the concepts of computer networks

OBJECTIVES:

- To understand the layering concepts in computer networks
- To understand the functions of each layer
- To have knowledge in different applications that use computer networks

UNIT I

7

Network architecture – Layers – Physical links – Channel access on links – SDMA – TDMA – FDMA – CDMA – Hybrid multiple access techniques - Issues in the data link layer - Framing – Error correction and detection – Link-level flow control

UNIT II

7

Medium access – Ethernet – Token ring – FDDI – Wireless LAN – Bridges and Switches

UNIT III

11

Circuit switching – Packet switching – Virtual circuit switching – IP – ARP – RARP – DHCP – ICMP – Routing algorithms – RIP – OSPF – Subnetting – CIDR – Interdomain routing – BGP – IPv6 – Multicasting – Congestion avoidance in network layer

UNIT IV

10

UDP – TCP – Flow control – Congestion control – Queueing discipline – Congestion avoidance – QoS – RPC

25

UNIT V

10

Email (SMTP, MIME, POP3, IMAP) – HTTP – DNS- SNMP – Telnet – FTP – TFTP

TOTAL:45 PERIODS

TEXT BOOKS:

IT9304 DISTRIBUTED SYSTEMS

L T P C

3 0 0 3

AIM:

The aim of the course is to convey an insight into the fundamental concepts, principles, and state-of-the-art practice underlying the design of distributed systems.

OBJECTIVES:

- To understand the importance of communication in distributed environment and the actual implementation of various communication mechanisms
- To study how a distributed operating system works and how it differs from the single processor OS.
- To learn how to manage the resources in a distributed environment
- To learn how to make a distributed systems fault tolerant
- To study how the above-mentioned techniques have been used in actual, real-life distributed systems.

UNIT I COMMUNICATION IN DISTRIBUTED ENVIRONMENT 8

Introduction – Various Paradigms in Distributed Applications – Remote Procedure Call – Remote Object Invocation – Message-Oriented Communication – Unicasting, Multicasting and Broadcasting – Group Communication.

UNIT II DISTRIBUTED OPERATING SYSTEMS 12

Issues in Distributed Operating System – Threads in Distributed Systems – Clock Synchronization – Causal Ordering – Global States – Election Algorithms – Distributed Mutual Exclusion – Distributed Transactions – Distributed Deadlock – Agreement Protocols .

26

UNIT III DISTRIBUTED RESOURCE MANAGEMENT 10

Distributed Shared Memory – Data-Centric Consistency Models – Client-Centric Consistency Models – Ivy – Munin – Distributed Scheduling – Distributed File Systems – Sun NFS.

UNIT IV FAULT TOLERANCE AND CONSENSUS 7

Introduction to Fault Tolerance – Distributed Commit Protocols – Byzantine Fault Tolerance – Impossibilities in Fault Tolerance.

UNIT V CASE STUDIES 8

Distributed Object-Based System – CORBA – COM+ – Distributed Coordination-Based System – JINI.

TOTAL:45 PERIODS

TEXT BOOKS:

1. George Coulouris, Jean Dollimore, Tim Kindberg, “Distributed Systems Concepts and Design”, Third Edition, Pearson Education Asia, 2002.
2. Hagit Attiya and Jennifer Welch, “Distributed Computing: Fundamentals, Simulations and Advanced Topics”, Wiley, 2004.

Wesley, 2004.

CS9306 COMPUTER NETWORKS LABORATORY

L T P C

0 0 3 2

AIM:

To have hands-on experience in network programming and to use simulation tools to analyze network protocols.

OBJECTIVES:

- To learn socket programming
- To use simulation tools.
- To analyze the performance of protocols in different layers in computer networks using simulation tools.

1. Applications using TCP Sockets like

- a. Echo client and echo server
- b. File transfer
- c. Remote command execution
- d. Chat
- e. Concurrent server

2. Applications using UDP Sockets like

- a. DNS
- b. SNMP

27

3. Applications using Raw Sockets like

- a. Ping
- b. Traceroute

4. RPC

5. Experiments using simulators like OPNET:

- a. Performance comparison of MAC protocols
- b. Performance comparison of Routing protocols
- c. Study of TCP/UDP performance

TOTAL:45 PERIODS

AIM:

Scope of this lab is to understand the application of case tools, which focuses on the following software engineering activities:

- Software requirements analysis and specification
- Software design
- Software implementation
- Software testing and maintenance
- Communication skills and teamwork
- Modeling techniques and CASE tools
- Software project planning and management

1. Study of case tools such as rational rose or equivalent tools

2. Requirements

Implementation of requirements engineering activities such as elicitation, validation, management using case tools

3. Analysis and design

Implementation of analysis and design using case tools.

4. Study and usage of software project management tools such cost estimates and scheduling

5. Documentation generators - Study and practice of Documentation generators.

6. Data modeling using automated tools.

7. Practice reverse engineering and re engineering using tools.

8. Exposure towards test plan generators, test case generators, test coverage and software metrics.

9. Meta modeling and software life cycle management.

TOTAL:45 PERIODS

B. Practice session (24 periods)

- 1. Resume / Report Preparation / Letter writing:** Students prepare their own resume and report. (4)
- 2. Presentation Skills:** Students make presentations on given topics. (8)
- 3. Group Discussion:** Students participate in group discussions. (6)
- 4. Interview Skills:** Students participate in Mock Interviews (6)

TOTAL; 45 PERIODS

IT9351 SERVICE ORIENTED ARCHITECTURE

L T P C

3 0 0 3

AIM:

To provide an overview of Service Oriented Architecture and enable the student to create applications in a collaborative environment.

OBJECTIVES:

- To study the importance of Service Oriented Architecture.
- Implementation of SOA in the Java and .NET frameworks.
- To study the advanced features of SOA.

UNIT I **9**

Introduction – Service Oriented Enterprise – Service Oriented Architecture (SOA) – SOA and Web Services – Multi-Channel Access – Business Process management – Extended Web Services Specifications – Overview of SOA – Concepts – Key Service Characteristics – Technical Benefits – Business Benefits

UNIT II **9**

SOA and Web Services – Web Services Platform – Service Contracts – Service-Level Data Model – Service Discovery – Service-Level Security – Service-Level Interaction patterns – Atomic Services and Composite Services – Proxies and Skeletons – Communication – Integration Overview – XML and Web Services - .NET and J2EE Interoperability – Service-Enabling Legacy Systems – Enterprise Service Bus Pattern

UNIT III **9**

Multi-Channel Access – Business Benefits – SOA for Multi Channel Access – Tiers – Business Process Management – Concepts – BPM, SOA and Web Services – WSBPEL – Web Services Composition

[

UNIT IV **9**

Java Web Services – JAX APIs – JAXP – JAX-RPC – JAXM – JAXR – JAXB

UNIT V **9**

Metadata Management – Web Services Security – Advanced Messaging – Transaction Management

TOTAL: 45 PERIODS

30

TEXTBOOKS:

1. Eric Newcomer, Greg Lomow, “Understanding SOA with Web Services”, Pearson Education, 2005.
2. James McGovern, Sameer Tyagi, Michael E Stevens, Sunil Mathew, “Java Web Services Architecture”, Elsevier, 2003. (Unit 4)

IT9352 WIRELESS NETWORKS

L T P C

3 0 0 3

AIM:

To introduce the concepts of Wireless Communication to explore the various types of existing Wireless Networks and to learn programming in Wireless environment.

OBJECTIVES:

- To understand the concepts of Wireless Communication
- To discuss the features of IEEE 802.11 Wireless LANs
- To learn the various types of cellular telephone systems
- To explain the role of TCP/IP in Mobile networks
- To understand the WAP framework

UNIT I WIRELESS COMMUNICATION

7

Cellular systems- Frequency Management and Channel Assignment- types of handoff and their characteristics, dropped call rates & their evaluation - MAC – SDMA – FDMA – TDMA – CDMA – Cellular Wireless Networks

UNIT II WIRELESS LAN

9

IEEE 802.11 Standards – Architecture – Services – Mobile Ad hoc Networks- WiFi and WiMAX - Wireless Local Loop

UNIT III MOBILE COMMUNICATION SYSTEMS

11

GSM-architecture-Location tracking and call setup- Mobility management- Handover- Security-GSM SMS –International roaming for GSM- call recording functions subscriber and service data mgt –Mobile Number portability -VoIP service for Mobile Networks –GPRS –Architecture-GPRS procedures-attach and detach procedures-PDP context procedure-combined RA/LA update procedures-Billing

UNIT IV MOBILE NETWORK AND TRANSPORT LAYERS**9**

Mobile IP – Dynamic Host Configuration Protocol-Mobile Ad Hoc Routing Protocols–
Multicast routing-TCP over Wireless Networks – Indirect TCP – Snooping TCP –
Mobile TCP – Fast Retransmit / Fast Recovery – Transmission/Timeout Freezing-
Selective Retransmission – Transaction Oriented TCP- TCP over 2.5 / 3G wireless
Networks

31**UNIT V APPLICATION LAYER****9**

WAP Model- Mobile Location based services -WAP Gateway –WAP protocols – WAP
user agent profile- caching model-wireless bearers for WAP - WML – WMLScripts -
WTA - iMode- SyncML

TOTAL: 45 PERIODS**TEXT BOOKS:**

1. Jochen Schiller, “Mobile Communications”, Second Edition, Pearson Education, 2003.
2. William Stallings, “Wireless Communications and Networks”, Pearson Education, 2002.

REFERENCES:

MA9267 STATISTICS AND LINEAR PROGRAMMING**L T P C****3 1 0 4****AIM:**

To provide the required skill to apply the statistical and Linear Programming tools for engineering problems.

OBJECTIVES:

To make the students acquire a fundamental knowledge in Statistical inference and Linear programming tools for engineering applications.

UNIT I TESTING OF HYPOTHESIS 12

Sampling distributions - Tests for single mean , proportion and difference of means (large and small samples) – Tests for single variance and equality of variances – χ^2 -test for goodness of fit – Independence of attributes – Non-parametric tests: Test for Randomness and Rank-sum test (Wilcoxon test).

UNIT II DESIGN OF EXPERIMENTS 12

Completely randomized design – Randomized block design – Latin square design - 22 - factorial design.

UNIT III STATISTICAL QUALITY CONTROL 12

Control charts for measurements (X and R charts) – Control charts for attributes (p, c and np charts) – Tolerance limits - Acceptance sampling

32

UNIT IV LINEAR PROGRAMMING 12

Formulation – Graphical solution – Simplex method – Big-M method - Transportation and Assignment models

UNIT V ADVANCED LINEAR PROGRAMMING 12

Duality – Dual simplex method – Integer programming – Cutting-plane method.

3. Winston, W.L., “Operations Research – Applications and Algorithms”, Thomson, 1st Indian Reprint, 4th edition, (2007).

AIM:

To understand the latest advances in the field of computation to optimize the utilization of resources.

OBJECTIVES:

- To enable resource sharing across networks.
- To integrate heterogeneous computing systems and data Resources with the aim of providing a global computing Space.
- To manage and schedule the resources in grid environments.
- To know the standards and protocols used.
- To Know the middleware in grid computing.

UNIT I CONCEPTS AND ARCHITECTURE 9

Introduction-Parallel and Distributed Computing-Cluster Computing-Grid Computing-Anatomy and Physiology of Grid-Review of Web Services-OGSA-WSRF.

UNIT II GRID MONITORING 9

Grid Monitoring Architecture (GMA) - An Overview of Grid Monitoring Systems-GridICE – JAMM -MDS-Network Weather Service-R-GMA-Other Monitoring Systems-Ganglia and GridMon

33**UNIT III GRID SECURITY AND RESOURCE MANAGEMENT 9**

Grid Security-A Brief Security Primer-PKI-X509 Certificates-Grid Security-Grid Scheduling and Resource Management-Scheduling Paradigms- Working principles of Scheduling -A Review of Condor, SGE, PBS and LSF-Grid Scheduling with QoS.

UNIT IV DATA MANAGEMENT AND GRID PORTALS 9

Data Management-Categories and Origins of Structured Data-Data Management Challenges-Architectural Approaches-Collective Data Management Services-Federation Services-Grid Portals-First-Generation Grid Portals-Second-Generation Grid Portals.

UNIT V GRID MIDDLEWARE 9

List of globally available grid Middlewares - Case Studies-Current version of Globus

Toolkit and gLite - Architecture, Components and Features.

TOTAL: 45 PERIODS

GE9261 ENVIRONMENTAL SCIENCE AND ENGINEERING

L T P C

(Common to all branches)

3 0 0 3

AIM:

To create awareness in every engineering graduate about the importance of environment, the effect of technology on the environment and ecological balance and make them sensitive to the environment problems in every professional endeavour that they participates.

OBJECTIVE:

At the end of this course the student is expected to understand what constitutes the environment, what are precious resources in the environment, how to conserve these resources, what is the role of a human being in maintaining a clean environment and useful environment for the future generations and how to maintain ecological balance and preserve bio-diversity. The role of government and non-government organization in environment managements.

UNIT I ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY

14

Definition, scope and importance of environment – need for public awareness - concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession

34

– food chains, food webs and ecological pyramids – Introduction, types, characteristic

features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In situ and ex-situ conservation of biodiversity. Field study of common plants, insects, birds. Field study of simple ecosystems – pond, river, hill slopes, etc.

UNIT II ENVIRONMENTAL POLLUTION

8

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – soil waste management: causes, effects and control measures of municipal solid wastes – role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides. Field study of local polluted site – Urban / Rural / Industrial / Agricultural.

UNIT III NATURAL RESOURCES

10

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people – Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles.

Field study of local area to document environmental assets – river / forest / grassland /

hill / mountain.

UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT

7

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management – resettlement and rehabilitation of people; its problems and concerns, case studies – role of nongovernmental organization- environmental ethics: Issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. – wasteland reclamation – consumerism and waste products – environment production act – Air (Prevention and Control of Pollution) act – Water (Prevention and control of Pollution) act – Wildlife protection act – Forest conservation act – enforcement machinery involved in environmental legislation central and state pollution control boards- Public awareness.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT

6

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – HIV / AIDS – women and child welfare – role of information technology in environment and human health – Case studies.

TOTAL:45 PERIODS

35

TEXT BOOKS: 1. Gilbert M.Masters, “Introduction to Environmental Engineering and Science”, 2nd edition, Pearson Education (2004).

IT9355 MOBILE COMPUTING LAB

L T P C

0 0 3 2

1. Simulation of application using J2ME simulator
 - a. Midlet and other basic UI items.
 - b. Bluetooth API
 - c. Implementation of Wireless Messaging
 - d. MMAPAPI
2. Simulation of applications to access web sites using Microsoft Windows Mobile .net environment
3. Simulation of Implementation of playing games and photo sharing applications using BREW (Binary Runtime Environment for Wireless Toolkit)
4. Simulation of Infotainment (news, weather forecasts etc) using WAP
5. Simulation of applications using symbian OS

TOTAL:45 PERIODS

IT9356 SERVICE ORIENTED ARCHITECTURE LAB

L T P C

0 0 3 2

AIM:

To enable the student to use Service Oriented Architecture and related technologies.

OBJECTIVES:

- To work with XML and related technologies.
- Implementation of Web services in the Java and .NET frameworks.
- To study and work with security and smart device applications.

36

EXPERIMENTS IN THE FOLLOWING TOPICS:

1. Creation of XML files, and validating it using DTD and XML Schema
2. Parsing and XML document using DOM and SAX parsers
3. XSLT
4. Working with JAXP APIs
5. XML – RPC Implementation
6. Creating Web Services in Java and .Net

7. Web service Composition

8. Web Service Security

9. Mobile Web Services

TOTAL: 45 PERIODS

CS9356 FREE AND OPEN SOURCE SOFTWARE LABORATORY L T P C

0 0 3 2

AIM:

The student will get exposure to operating system and networking concepts at source code level.

OBJECTIVES:

- To learn the setting up gnu/Linux-based servers and workstation
- To learn shell programming
- To learn to configure application and server software
- To learn to perform system administration tasks
- To learn to use free and open source components.

1. GNU/Linux OS installation (provide details of how to detect hardware, configure disk partitions & filesystems and successfully install a GNU/Linux distribution)

2. Basic shell commands - logging in, listing files, editing files, copying/moving files, viewing file contents, changing file modes and permissions, process management

3. User and group management, file ownerships and permissions, PAM authentication, Introduction to common system configuration files & log files

4. Configuring networking, basics of TCP/IP networking and routing, connecting to the Internet (through dialup, DSL, ethernet, leased line)

5. Configuring additional hardware - sound cards, displays & display cards, network cards, modems, usb drives, CD writers

37

6. Performing every day tasks using GNU/Linux - accessing the Internet, playing music, editing documents and spreadsheets, sending and receiving email, copy files from disks and over the network, playing games, writing CDs

7. Setting up email servers - using postfix (for SMTP services), courier (for IMAP & POP3 services), squirrelmail (for webmail services)
8. Setting up web servers - using Apache (for HTTP services), Setting up proxy services, printer services, firewall
9. Using the GNU Compiler Collection - getting acquainted with the GNU compiler tools - the C preprocessor (cap), the C compiler (gecko) and the C++ compiler (g++), and the assembler (gas)
10. Understanding build systems - constructing make files and using make, using autoconf and autogen to automatically generate makefiles tailored for different development environments, Using flex (lex) and bison (yacc) to design parsers

TOTAL: 45 PERIODS

IT9401 SOFTWARE TESTING

L T P C

3 0 0 3

AIM:

The course looks at the role of developers in areas such as test planning, implementation, and defect tracking. It explains how to review and manage test requirements and how to incorporate testing into the software development life cycle.

OBJECTIVES:

- To determine software testing objectives and criteria
- To develop and validate a test plan
- To select and prepare test cases
- To identify the need for testing
- To prepare testing policies and standards
- To use testing aids and tools
- To test before buying a software package
- Test after maintenance and enhancement changes
- To measure the success of testing efforts

UNIT I INTRODUCTION

8

Testing as an Engineering Activity – Testing as a Process – testing axioms - Basic Definitions – Software Testing Principles – The Tester’s Role in a Software

Development Organization – Origins of Defects – cost of defects - Defect Classes –
The Defect Repository and Test Design – Defect Examples – Developer/Tester
Support for Developing a Defect Repository – Defect Prevention Strategies

UNIT II TEST CASE DESIGN

11

Test Case Design Strategies – Using Black Box Approach to Test Case Design -
Random Testing – Requirements based testing – Boundary Value Analysis – Decision
tables - Equivalence Class Partitioning - State-based testing – Cause-effect graphing –
Error guessing - Compatibility testing – User documentation testing – Domain testing
Using White Box Approach to Test design – Test Adequacy Criteria – static testing vs.
structural testing – code functional testing - Coverage and Control Flow Graphs –
Covering Code Logic – Paths – Their Role in White-box Based Test Design – code
complexity testing – Evaluating Test Adequacy Criteria.

UNIT III LEVELS OF TESTING

9

The Need for Levels of Testing – Unit Test – Unit Test Planning –Designing the Unit
Tests - The Test Harness – Running the Unit tests and Recording results – Integration
tests – Designing Integration Tests – Integration Test Planning – Scenario testing –
Defect bash elimination System Testing – Acceptance testing – Performance testing –
Regression Testing – Internationalization testing – Ad-hoc testing - Alpha , Beta Tests –
testing OO systems – Usability and Accessibility testing – Configuration testing –
Compatibility testing – Testing the documentation – Website testing

UNIT IV TEST MANAGEMENT

9

People and organizational issues in testing – organization structures for testing teams
– testing services - Test Planning – Test Plan Components – Test Plan Attachments –
Locating Test Items – test management – test process - Reporting Test Results – The
role of three groups in Test Planning and Policy Development – Introducing the test
specialist – Skills needed by a test specialist – Building a Testing Group.

UNIT V TEST AUTOMATION

8

Software test automation – skills needed for automation – scope of automation –
design and architecture for automation – requirements for a test tool – challenges in
automation - Test metrics and measurements –project, progress and productivity
metrics

TOTAL: 45 PERIODS TEXT BOOKS: 1. Srinivasan Desikan and Gopaldaswamy Ramesh, “Software Testing – Principles and Practices”, Pearson education, 2006.

2. Ilene Burnstein, “Practical Software Testing”, Springer International Edition, 2003.

REFERENCES:

39

IT9402 CRYPTOGRAPHY AND SECURITY

L T P C

3 0 0 3

AIM:

To introduce the fundamentals of Cryptography and its application to security.

OBJECTIVES:

- To understand the mathematics behind Cryptography
- To understand the standard algorithms used to provide confidentiality provide integrity and authenticity.
- To get a working knowledge of network security, data base security and DS security issues in order to build secure systems.

UNIT I

9

Security trends – Attacks and services – Classical crypto systems – Different types of ciphers – LFSR sequences – Basic Number theory – Congruences – Chinese Remainder theorem – Modular exponentiation – Fermat and Euler's theorem – Legendre and Jacobi symbols – Finite fields – continued fractions.

UNIT II **9**

Simple DES – Differential cryptanalysis – DES – Modes of operation – Triple DES – AES – RC5, RC4 – RSA – Attacks – Primality test – factoring.

UNIT III **9**

Discrete Logarithms – Computing discrete logs – Diffie-Hellman key exchange – Elliptic curve cryptography Key exchange - ElGamal Public key cryptosystems – Message Authentication codes - Hash functions – Hash algorithms - Secure Hash – Birthday attacks - MD5 – Authentication protocols - Digital signatures – RSA, ElGamal, DSA.

UNIT IV **9**

Authentication applications – Kerberos, X.509, PKI – Electronic Mail security – PGP, S/MIME – IP security – Web Security – SSL, TLS, SET – system security.

UNIT V **9**

Trusted Operating systems – security models – designing trusted OS – assurance – Data base security – multi-level databases – multi-level security.

TOTAL: 45 PERIODS

TEXT BOOKS

1 Wade Trappe, Lawrence C Washington, “ Introduction to Cryptography with coding theory”, 2nd ed, Pearson, 2007.

2 William Stallings, “Cryptography and Network security Principles and Practices”, Pearson/PHI, 4th ed, 2006.

40

MG9401 PRINCIPLES OF MANAGEMENT

L T P C

3 0 0 3

UNIT I OVERVIEW OF MANAGEMENT **9**

Organization - Management - Role of managers - Evolution of Management thought - Organization and the environmental factors - Managing globally - Strategies for

International Business.

UNIT II PLANNING **9**

Nature and purpose of planning - Planning process - Types of plans – Objectives - -
Managing by objective (MBO) Strategies - Types of strategies - Policies - Decision
Making - Types of decision - Decision Making Process - Rational Decision Making
Process - Decision Making under different conditions.

UNIT III ORGANIZING **9**

Nature and purpose of organizing - Organization structure - Formal and informal
groups / organization - Line and Staff authority - Departmentation - Span of control -
Centralization and Decentralization - Delegation of authority - Staffing - Selection and
Recruitment - Orientation - Career Development - Career stages – Training - -
Performance Appraisal.

UNIT IV DIRECTING **9**

Creativity and Innovation - Motivation and Satisfaction - Motivation Theories -
Leadership - Leadership theories - Communication - Hurdles to effective
communication - Organization Culture - Elements and types of culture - Managing
cultural diversity.

UNIT V CONTROLLING **9**

Process of controlling - Types of control - Budgetary and non-budgetary control
techniques - Managing Productivity - Cost Control - Purchase Control - Maintenance
Control - Quality Control - Planning operations.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Hellriegel, Slocum & Jackson, ' Management - A Competency Based Approach', Thomson South Western, 10th edition, 2007.
2. Harold Koontz, Heinz Weihrich and Mark V Cannice, 'Management - A global & Entrepreneurial Perspective', Tata Mcgraw Hill, 12th edition, 2007.
3. Stephen P. Robbins and Mary Coulter, 'Management', Prentice Hall of India, 8th edition.
4. Charles W L Hill, Steven L McShane, 'Principles of Management', Mcgraw Hill Education, Special Indian Edition, 2007.

41

IT9403 SOFTWARE TESTING LABORATORY

L T P C

0 0 3 2

AIM:

To understand the various testing tools and their use with various testing methodologies

OBJECTIVES:

- to study the working of testing tools
 - to apply the fundamental testing techniques associated with software project development
 - to automate various testing strategies in specific domains
1. Study of various tools for software testing such as WinRunner, LoadRunner, Rational Rose Test Suite etc.,
 2. Performing the following testing using the testing tools
 1. Requirements testing
 2. use-case scenario testing
 3. Design testing
 4. code testing
 5. Path testing
 6. Code coverage testing
 7. Data-flow testing
 8. Load testing
 9. Regression testing
 10. Documentation testing
 3. mini-project: developing an automated test-case generation tool for domains such as :
 - a. web-site development
 - b. inventory management
 - c. shopping cart

- d. finance management
- e. health-care

TOTAL: 45 PERIODS

42

IT9404 SECURITY LABORATORY

L T P C

0 0 3 2

1. Write programs to implement the following **number theory** concept
 - Prime and Relatively Prime Numbers
 - Arithmetic Modulo 8 and Multiplication Modulo 8
 - Fermat's Theorem and Euler's Totient Function
2. Write programs to implement the following **cryptography algorithms**
 - Playfair cipher and Hill cipher
 - Simplified DES algorithm
 - RSA algorithm
3. Write programs to implement the following **hash algorithms**
 - MD5
 - SHA-1
4. Write programs to implement the following **Authentication**
 - Digital Signature and Digital Certificate
 - Kerberos System
 - X.509
5. Write programs to implement the following **Trusted OS** issues
 - Write a program to implement a set of rules combining the secrecy controls of the Bell-La Padula with integrity controls of the Biba model.
Write a program to implement UNIX operating system structure files by using a tree. Each file is at a leaf of the tree, and the unique path from the root of the leaf identifies the file. Each interior node is sub directory, which specifies the names of the paths leading form that node. A user can block access through a node by restricting access to the sub directory. Device a method that uses this structure to implement discretionary access policy.
6. Write a program to implement the following database security issues.

- Cryptography in databases.
- Access Control list.
- Two phase locking technique.

7. Write a program to implement Hacking windows.

- BIOS Passwords.
- Windows login password
- Internet explorer users
- Changing windows visuals
- Accessing restricted drives.

TOTAL: 45 PERIODS

43

CS9351 DIGITAL SIGNAL PROCESSING

L T P C

3 0 0 3

AIM:

To give an understanding on the study that deals with the representation of signals as ordered sequences of numbers and how to process those ordered sequences.

OBJECTIVES:

- To understand the basics of signals and system by analyzing the various transformations available and determine their use to DSP
- To study on the various digital filtering techniques and how to apply to DSP
- To study on the ways to estimate signal parameters, and transform a signal into a form that is more informative.
- To give students a flavour on the applications of DSP in the areas of speech and image

UNIT I SIGNALS AND SYSTEMS

9

Basic elements of DSP – concepts of frequency in Analog and Digital Signals – sampling theorem – Discrete – time signals, systems – Analysis of discrete time LTI systems – Z transform – Convolution (linear and circular) – Correlation.

UNIT II FREQUENCY TRANSFORMATIONS

9

Introduction to DFT – Properties of DFT – Filtering methods based on DFT – FFT Algorithms - Decimation – in – time Algorithms, Decimation – in – frequency

Algorithms – Use of FFT in Linear Filtering – DCT.

UNIT III IIR FILTER DESIGN **9**

Structures of IIR – Analog filter design – Discrete time IIR filter from analog filter – IIR filter design by Impulse Invariance, Bilinear transformation, Approximation of derivatives – (HPF, BPF, BRFF) filter design using frequency translation

UNIT IV FIR FILTER DESIGN **9**

Structures of FIR – Linear phase FIR filter – Filter design using windowing techniques, Frequency sampling techniques – Finite word length effects in digital Filters

UNIT V APPLICATIONS **9**

Multirate signal processing – Speech compression – Adaptive filter – Musical sound processing – Image enhancement.

TOTAL: 45 PERIODS

TEXT BOOKS: 1. John G. Proakis & Dimitris G. Manolakis, “Digital Signal Processing – Principles,

Algorithms & Applications”, Fourth edition, Pearson education / Prentice Hall, 2007.

2. Emmanuel C. Ifeachor, & Barrie W. Jervis, “Digital Signal Processing”, Second edition, Pearson Education / Prentice Hall, 2002.

44

CS9022 INTERNET PROGRAMMING

L T P C

3 0 0 3

AIM:

To provide an overview of 3-tier architecture and enable the student to create enterprise applications.

OBJECTIVES:

- To introduce the feature of the J2EE framework and the usage of MVC architecture.
- To design and create user interfaces using JSP.
- To write the business logic for the middle tier.
- To provide transaction and security support for enterprise applications.
- To study the features of other frameworks.

UNIT I **9**

Introduction – 3 tier architecture – working with model-view-controller – JCP – J2EE
XML based APIs – Application servers

UNIT II **9**

Presentation tier and EIS tier – servlet programming – JSP – Java Mail – JMS – Java transactions – JNDI – Java authentication and authorization services – Java cryptography (9)

UNIT III **9**

Service Tier and Data tier – EJB architecture – session beans – entity beans – message driven beans – JDBC – J2EE connector architecture

UNIT IV **9**

Web Services – J2EE Web Services – patterns – presentation, service tier and Data tier patterns – J2ME

UNIT V **9**

AJAX - Struts – JSF – Hibernate – Spring

TOTAL: 45 PERIODS

TEXT BOOKS

1. McGovern et al, “J2EE 1.4 Bible”, Wiley India, 2007.
2. Black Book, “Java Server Programming”, Dreamtech Press, 2007. (Unit V)

REFERENCES

1. Cay S Horstmann, Gary Cornell, “Core Java 2” Vol II, 7th ed, Pearson Education, 2005.
2. W Clay Richardson, et al, “Professional Java JDK 6 Edition”, Wrox, 2007

AIM:

Advanced database aims at providing an understanding of the principles used in the design of different kinds of data models. It is also deals with the Transaction management of these different databases.

OBJECTIVES:

- To understand about different data models that can be used for specialized applications
- To make the students to get familiarized with transaction management of advanced database models
- To develop in-depth knowledge about web and intelligent database systems.
- To provide an introductory concept about the way in which data can be stored in multimedia databases.

UNIT I RELATIONAL MODEL ISSUES 9

ER Model - Normalization – Query Processing – Query Optimization - Transaction Processing - Concurrency Control – Recovery - Database Tuning.

UNIT II DISTRIBUTED DATABASES 9

Parallel Databases – Inter and Intra Query Parallelism – Distributed Database Features – Distributed Database Architecture – Fragmentation – Distributed Query Processing – Distributed Transactions Processing – Concurrency Control – Recovery – Commit Protocols.

UNIT III OBJECT ORIENTED DATABASES 9

Introduction to Object Oriented Data Bases - Approaches – Modeling and Design - Persistence – Query Languages - Transaction - Concurrency – Multi Version Locks – Recovery – POSTGRES – JASMINE –GEMSTONE - ODMG Model.

UNIT IV EMERGING SYSTEMS 9

Enhanced Data Models - Client/Server Model - Data Warehousing and Data Mining - Web Databases – Mobile Databases- XML and Web Databases.

UNIT V CURRENT ISSUES 9

Rules - Knowledge Bases - Active and Deductive Databases - Multimedia Databases–

Multimedia Data Structures – Multimedia Query languages - Spatial Databases.

CS9023 UNIX INTERNALS

L T P C

3 0 0 3

AIM:

To understand about the file system, system calls, process, memory management and I/O in Unix.

OBJECTIVES:

- To introduce the architecture of the Unix Operating System.
- To understand the buffer structure
- To introduce inodes
- To know what is super block
- To cover various system calls
- To study system boot and the Init process
- To introduce process states
- To introduce signals
- To understand memory management
- To study IPC mechanisms

UNIT I OVERVIEW	8
General Overview of the System: History – System structure – User perspective – Operating system services – Assumptions about hardware. Introduction to the Kernel : Architecture of the UNIX operating system – Introduction to system concepts. The Buffer Cache: Buffer headers – Structure of the buffer pool – Scenarios for retrieval of a buffer – Reading and writing disk blocks – Advantages and disadvantages of the buffer cache.	
UNIT II FILE SUBSYSTEM	8
Internal representation of files: Inodes – Structure of a regular file – Directories – Conversion of a path name to an Inode – Super block – Inode assignment to a new file – Allocation of disk blocks.	
UNIT III SYSTEM CALLS FOR THE FILE SYSTEM	10
Open – Read – Write – File and record locking – Adjusting the position of file I/O – Lseek – Close – File creation – Creation of special files – Changing directory, root, owner, mode – stat and fstat – Pipes – Dup – Mounting and unmounting file systems – link – unlink.	
UNIT IV PROCESSES	10
Process states and transitions – Layout of system memory – The context of a process – Saving the context of a process – Manipulation of the process address space - Sleep. Process Control : Process creation – Signals – Process termination – Awaiting process termination – Invoking other programs – user id of a process – Changing the size of a process - Shell – System boot and the INIT process– Process Scheduling.	
UNIT V MEMORY MANAGEMENT AND I/O	9
Memory Management Policies : Swapping – Demand paging. The I/O Subsystem : Driver Interface – Disk Drivers – Terminal Drivers– Streams – Inter process communication.

IT9021 VISUAL PROGRAMMING**L T P C****3 0 0 3****AIM:**

To introduce windows programming and to cover visual C++ in detail.

OBJECTIVES:

- To introduce event driven programming
- To develop and display a window
- To illustrate the working of message loop
- To introduce window messages
- To illustrate the data types
- To program using Bitmaps
- To develop dialog based applications
- To use static controls
- To use dynamic controls
- To understand document view architecture
- To understand modal and modeless dialogs
- To develop DLL.

UNIT I**8**

The windows programming Model- Event driven programming- GUI concepts – Overview of Windows programming – Creating the window – Displaying the window – message Loop – windows procedure – WM_PAINT message – WM_DESTROY message – Data types – Resources - An Introduction to GDI – Device context- Text output- Scroll Bars – Keyboard – Mouse – Menus.

UNIT II**10**

Visual C++ components – Introduction to Microsoft Foundation Classes Library – Getting started with AppWizard – Class Wizard – Event handling – Keyboard and

Mouse events - Graphics Device Interface, Colors, Fonts, Pen, Brush, Single and Multiple document interface - Reading and Writing documents – WM – SIZE, WMCHAR messages. Resources – Bitmaps creation, usage of BMP and displaying a file existing as a BMP.

48

UNIT III **9**

Dialog Based Applications, controls – Animate control, List Box, Combo Box, Label , Edit box , Radio button, frame, command button , image list, CRect tracker, Tree control , CtabControl - Dynamic controls – slider control , progress control. Inheriting CTreeView – CrichteditView

UNIT IV **9**

Document view Architecture, Serialization - Multithreading. Menus – Keyboard Accelerators – Tool bars – Tool tip - property sheet. Modal Dialog, Modeless Dialog - CColorDialog, CFileDialog

UNIT V **9**

Status bars – To display in existing status bar, creating new status bar - splitter windows and multiple views – Dynamic Link Library – Data base Management with ODBC, TCP/IP, Winsock and WinInet, ActiveX control – creation and usage, Container class, Exception handling and MFC debugging support.

CS9027 DATA WAREHOUSING AND DATA MINING

L T P C

3 0 0 3

AIM: To serve as an introductory course to under graduate students with an emphasis on the design aspects of Data Mining and Data Warehousing

OBJECTIVE:

This course has been designed with the following objectives:

- To introduce the concept of data mining with in detail coverage of basic tasks, metrics, issues, and implication. Core topics like classification, clustering and association rules are exhaustively dealt with.
- To introduce the concept of data warehousing with special emphasis on architecture and design.

UNIT I DATA WAREHOUSING

10

Data warehousing Components –Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools –Metadata.

49

UNIT II BUSINESS ANALYSIS

8

Reporting and Query tools and Applications – Tool Categories – The Need for Applications – Cognos Impromptu – Online Analytical Processing (OLAP) – Need – Multidimensional Data Model – OLAP Guidelines – Multidimensional versus Multirelational OLAP – Categories of Tools – OLAP Tools and the Internet.

UNIT III DATA MINING

8

Introduction – Data – Types of Data – Data Mining Functionalities – Interestingness of Patterns – Classification of Data Mining Systems – Data Mining Task Primitives – Integration of a Data Mining System with a Data Warehouse – Issues –Data Preprocessing.

UNIT IV ASSOCIATION RULE MINING AND CLASSIFICATION

11

Mining Frequent Patterns, Associations and Correlations – Mining Methods – Mining Various Kinds of Association Rules – Correlation Analysis – Constraint Based Association Mining – Classification and Prediction - Basic Concepts - Decision Tree

Induction - Bayesian Classification – Rule Based Classification – Classification by Backpropagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods - Prediction

UNIT V CLUSTERING AND APPLICATIONS AND TRENDS IN DATA MINING

8

Cluster Analysis - Types of Data – Categorization of Major Clustering Methods - Kmeans – Partitioning Methods – Hierarchical Methods - Density-Based Methods –Grid Based Methods – Model-Based Clustering Methods – Clustering High Dimensional Data - Constraint – Based Cluster Analysis – Outlier Analysis – Data Mining Applications.

TOTAL:45 PERIODS

TEXT BOOKS:

4. Soumendra Mohanty, “Data Warehousing Design, Development and Best Practices”, Tata McGraw – Hill Edition, 2006.

50

CS9029 NET AND C# PROGRAMMING

L T P C

3 0 0 3

AIM:

To provide an introduction to the .NET framework and enable the student to program in C#.

OBJECTIVES:

- To study basic and advanced features of the C# language
- To create form based and web based applications
- To study the internals of the .NET framework

UNIT I**9**

C# and the .NET framework – C# basics – Objects and types – Inheritance – Arrays – Operators and casts – Indexers

UNIT II**9**

Delegates and events – Strings and regular expressions – Generics – Collections – Memory management and pointers – Errors and exceptions

UNIT III**9**

Tracing and events - threading and synchronization - .Net security – localization – Manipulating XML - Managing the file system – basic network programming

UNIT IV**9**

Window based applications – Data access with .NET – basics of ASP .NET - Introduction to web services

UNIT V**9**

Architecture – Assemblies – shared assemblies – CLR hosting – Appdomains – Reflection

TOTAL: 45 PERIODS**TEXT BOOK:**

1. Christian Nagel et al. “Professional C# 2005 with .NET 3.0”, Wiley India , 2007

REFERENCES:

1. Jesse Liberty, “Programming C#”, O’Reilly, 2001.
2. Andrew Troelson, “Pro C# with .NET 3.0”, Apress, 2007.
3. Kevin Hoffman, “Visual C# 2005”, Pearson Education, 2006.
4. S. Thamarai Selvi, R. Murugesan, “A Text Book on C#”, Pearson Education, 2003.

AIM:

The aim of this course is to understand the issues and challenges in tackling natural language and the use of statistical approaches in this challenging area.

OBJECTIVES:

- To study the features of natural languages including Indian Languages
- To grasp Morphology and Parts-of-Speech and its processing
- To understand Probabilistic Models for language processing
- To comprehend the models for Syntax analysis
- To understand Semantics and Pragmatics of natural language

UNIT I INTRODUCTION**9**

Issues – Motivation – Theory of Language -Features of Indian Languages – Issues in Font – Coding Techniques – sorting & searching issues.

UNIT II MORPHOLOGY AND PARTS-OF-SPEECH**9**

Phonology – Computational Phonology - Words and Morphemes – Segmentation – Categorization and Lemmatisation – Word Form Recognition – Valency - Agreement - Regular Expressions and Automata – Morphology- Morphological issues of Indian Languages – Transliteration.

UNIT III PROBABILISTIC MODELS**9**

Probabilistic Models of Pronunciation and Spelling – Weighted Automata – N- Grams – Corpus Analysis – Smoothing – Entropy - Parts-of-Speech – Taggers – Rule based models – Hidden Markov Models – Speech Recognition

UNIT IV SYNTAX**9**

Basic Concepts of Syntax – Parsing Techniques – General Grammar rules for Indian Languages – Context Free Grammar – Parsing with Context Free Grammars – Top Down Parser – Earley Algorithm – Features and Unification - Lexicalised and Probabilistic Parsing.

UNIT V SEMANTICS AND PRAGMATICS**9**

Representing Meaning – Computational Representation – Meaning Structure of Language – Semantic Analysis – Lexical Semantics – WordNet – Pragmatics –

Discourse – Reference Resolution – Text Coherence – Dialogue Conversational Agents.

TOTAL:45 PERIODS

TEXT BOOKS:

1. Daniel Jurafsky and James H. Martin “Speech and Language Processing”, Prentice Hall, 2000.
2. Ronald Hausser “Foundations of Computational Linguistics”, Springer-Verleg, 1999.

REFERENCES:

1. James Allen “Natural Language Understanding”, Benjamin/Cummings Publishing Co. 1995.

52

IT9023 ARTIFICIAL INTELLIGENCE

L T P C

3 0 0 3

AIM:

The aim of this course is to provide an introduction to some basic issues and algorithms in artificial intelligence (AI). The course also provides an overview of intelligent agent design, where agents perceive their environment and act rationally to fulfill their goals. The course approaches AI from an algorithmic, computer sciencecentric perspective.

OBJECTIVES:

- To be familiar with the history of AI, philosophical debates, and be able to discuss the potential and limitations of the subject in its current form.
- To identify the kind of problems that can be solved using AI techniques; to know the relation between AI and other areas of computer science
- To have knowledge of generic problem-solving methods in AI.
- To understand the basic techniques of knowledge representation and their use.
- To know what the basic components of an intelligent agent are, and how this relates to other advanced subjects such as information retrieval, database systems,

computer vision, robotics, human-computer interaction, reactive systems etc.

- To be able to implement basic decision making algorithms, including search-based problem solving techniques, and first-order logic.
- To know the basic issues in machine learning, and be able to apply straightforward techniques to learn from observed data.
- To be able to explain the difficulty of computer perception with examples from different modalities, and be able to show how perception affects intelligent systems design.

UNIT I INTRODUCTION

9

Intelligent Agents –Environments – Behavior – Structure – Artificial Intelligence – Present and Future - Problem Solving –agents – examples– uninformed search strategies – Avoiding repeated states – searching with partial information.

UNIT II SEARCHING TECHNIQUES

9

Informed search strategies –greedy – best first – A* - local search algorithms and optimization – local search in continuous spaces – Constraint satisfaction problems (CSP) – Backtracking search and Local search – Structure – Adversarial Search – Games – Optimal decisions in games – Alpha – Beta Pruning – imperfect real-time decision games – elements of chance -

UNIT III KNOWLEDGE REPRESENTATION AND REASONING

9

Logical Agents – Wumpus world - Propositional logic - First order logic - syntax and semantics – Using first order logic – Inference – forward chaining – backward chaining– Knowledge representation – Ontological Engineering – Categories and objects – Actions – Simulation and events – Mental events and mental objects. Reasoning with Default Information – Truth Maintenance Systems – Reasoning with Uncertain Information – Axioms of Probability – Independence – Bayes’ Rule and it’s use

UNIT IV LEARNING

9

Learning from observations – forms of learning – Inductive learning - Learning decision trees – Ensemble learning – Knowledge in learning – Logical formulation of learning – Explanation based learning – Learning using relevant information - Reinforcement learning – Passive reinforcement learning – Active reinforcement

learning – Generalization in reinforcement learning.

[

53

UNIT V APPLICATIONS

9

Communication – Communication as action – Formal grammar for a fragment of English – Syntactic analysis – Augmented grammars – Semantic interpretation - Perception – image Formation – Image Processing – Object Recognition – Robotics – Robotic Perception – Planning –Moving –Robotic Software Architecture.

TOTAL : 45 PERIODS

TEXT BOOKS:

1. Stuart Russell, Peter Norvig, “Artificial Intelligence – A Modern Approach”, Second Edition, Pearson Education, 2004.

REFERENCES:

1. Nils J. Nilsson, “Artificial Intelligence: A new Synthesis”, Harcourt Asia Pvt. Ltd., 2000.

3. George F. Luger, “Artificial Intelligence-Structures And Strategies For Complex Problem Solving”, Pearson Education, 2002.

CS9031 CYBER FORENSICS

L T P C

3 0 0 3

AIM:

To study different types of Cyberforensic technologies and enable the student to have a foundation in this emerging area.

OBJECTIVES:

- To study the fundamentals of computer forensics
- To have an overview of techniques for Data Recovery and Evidence Collection
- To study various threats associated with security and information warfare
- To study the tools and tactics associated with cyberforensics.

UNIT I

9

Computer Forensics Fundamentals – Types of Computer Forensics Technology –
Types of Vendor and Computer Forensics Services

UNIT II **9**

Data Recovery – Evidence Collection and Data Seizure – Duplication and Preservation
of Digital Evidence – Computer Image Verification and Authentication

UNIT III **9**

Discover of Electronic Evidence – Identification of Data – Reconstructing Past Events
– Networks

UNIT IV **9**

Fighting against Macro Threats – Information Warfare Arsenal – Tactics of the Military
– Tactics of Terrorist and Rogues – Tactics of Private Companies

54

UNIT V **9**

The Future – Arsenal – Surveillance Tools – Victims and Refugees – Advanced
Computer Forensics

TOTAL: 45 PERIODS TEXTBOOK:

1. John R. Vacca, “Computer Forensics”, Firewall Media, 2004.

REFERENCES:

1. Chad Steel, “Windows Forensics”, Wiley India, 2006.
2. Majid Yar, “Cybercrime and Society”, Sage Publications, 2006.

IT9024 DIGITAL IMAGE PROCESSING L T P C

3 0 0 3 AIM:

The aim is to inculcate a basic training in the processing of images for practical
applications in the domain of medical, remoting sessions and in general.

OBJECTIVES:

- To introduce basic concepts in acquiring, storage and Process of images
- To introduce for enhancing the quality of images.
- To introduce techniques for extraction and processing of region of interest
- To introduce case studies of Image Processing.

UNIT I FUNDAMENTALS OF IMAGE PROCESSING **9**

Introduction – Steps in Image Processing Systems – Image Acquisition – Sampling and Quantization – Pixel Relationships – Colour Fundamentals and Models, File Formats, Image operations – Arithmetic, Geometric and Morphological.

UNIT II IMAGE ENHANCEMENT **9**

Spatial Domain Gray level Transformations Histogram Processing Spatial Filtering – Smoothing and Sharpening. Frequency Domain : Filtering in Frequency Domain – DFT, FFT, DCT – Smoothing and Sharpening filters – Homomorphic Filtering.

UNIT III IMAGE SEGMENTATION AND FEATURE ANALYSIS **9**

Detection of Discontinuities – Edge Operators – Edge Linking and Boundary Detection – Thresholding – Region Based Segmentation – Morphological WaterSheds – Motion Segmentation, Feature Analysis and Extraction.

UNIT IV MULTI RESOLUTION ANALYSIS AND COMPRESSIONS **9**

Multi Resolution Analysis : Image Pyramids – Multi resolution expansion – Wavelet Transforms. Image Compression : Fundamentals – Models – Elements of Information Theory – Error Free Compression – Lossy Compression – Compression Standards.

UNIT V APPLICATIONS OF IMAGE PROCESSING **9**

Image Classification – Image Recognition – Image Understanding – Video Motion Analysis – Image Fusion – Steganography – Digital Compositing – Mosaics – Colour Image Processing..

TOTAL: 45 PERIOD

55

TEXT BOOKS:

1. Rafael C.Gonzalez and Richard E.Woods, “Digital Image Processing” Second Edition, Pearson Education, 2003.

REFERENCES:

4. Richard O. Duda, Peter E. HOF, David G. Stork, “Pattern Classification” Wiley Student Edition, 2006.

CS9032 GRAPH THEORY

L T P C

3 0 0 3

AIM:

Knowledge of basic Graph Theory and development of skills in problem solving.

OBJECTIVES:

- Acquiring knowledge of the basic tools in Graph Theory. Some advanced topics including some algorithms.

UNIT I INTRODUCTION

9

Graphs – Introduction – Isomorphism – Sub graphs – Walks, Paths, Circuits – Connectedness – Components – Euler Graphs – Hamiltonian Paths and Circuits – Trees – Properties of trees – Distance and Centers in Tree – Rooted and Binary Trees.

UNIT II TREES, CONNECTIVITY, PLANARITY

9

Spanning trees – Fundamental Circuits – Spanning Trees in a Weighted Graph – Cut Sets – Properties of Cut Set – All Cut Sets – Fundamental Circuits and Cut Sets – Connectivity and Separability – Network flows – 1-Isomorphism – 2-Isomorphism – Combinational and Geometric Graphs – Planer Graphs – Different Representation of a Planer Graph.

UNIT III MATRICES, COLOURING AND DIRECTED GRAPH

9

Incidence matrix – Submatrices – Circuit Matrix – Path Matrix – Adjacency Matrix – Chromatic Number – Chromatic partitioning – Chromatic polynomial – Matching – Covering – Four Color Problem – Directed Graphs – Types of Directed Graphs – Digraphs and Binary Relations – Directed Paths and Connectedness – Euler Graphs – Adjacency Matrix of a Digraph.

UNIT IV ALGORITHMS

9

Algorithms: Connectedness and Components – Spanning tree – Finding all Spanning Trees of a Graph – Set of Fundamental Circuits – Cut Vertices and Separability –

Directed Circuits.

UNIT V ALGORITHMS

9

Algorithms: Shortest Path Algorithm – DFS – Planarity Testing – Isomorphism.

TOTAL:45 PERIODS

56

TEXT BOOKS:

1. Narsingh Deo, “Graph Theory: With Application to Engineering and Computer Science”, Prentice Hall of India, 2003.

REFERENCES:

1. R.J. Wilson, “Introduction to Graph Theory”, Fourth Edition, Pearson Education, 2003.

CS9035 FREE/OPEN SOURCE SOFTWARE

L T P C

3 0 0 3

AIM:

To understand the FOSS Philosophy and use a Linux distribution to learn installation, administration and programming in this environment

OBJECTIVES:

- To impart a first hand knowledge on the FOSS philosophy and methodology
- To enable the students to install and use Linux distribution
- To train the students in Linux desktop usage and some commonly used programs
- To encourage students to apply OSS philosophy and migrate to FOSS in their own domains
- To develop application programs using FOSS

UNIT I HISTORY AND OVERVIEW OF GNU/LINUX AND FOSS

3

Definition of FOSS & GNU, History of GNU/Linux and the Free Software Movement, Advantages of Free Software and GNU/Linux, FOSS usage , trends and potential— global and Indian.

UNIT II SYSTEM ADMINISTRATION

10

GNU/Linux OS installation--detect hardware, configure disk partitions & file systems and install a GNU/Linux distribution ; Basic shell commands -logging in, listing files,

editing files, copying/moving files, viewing file contents, changing file modes and permissions, process management ; User and group management, file ownerships and permissions, PAM authentication ; Introduction to common system configuration files & log files ; Configuring networking, basics of TCP/IP networking and routing, connecting to the Internet (through dialup, DSL, Ethernet, leased line) ; Configuring additional hardware -sound cards, displays & display cards, network cards, modems, USB drives, CD writers ; Understanding the OS boot up process ; Performing every day tasks using gnu/Linux --accessing the Internet, playing music, editing documents and spreadsheets, sending and receiving email, copy files from disks and over the network, playing games, writing CDs ; X Window system configuration and utilities--configure X windows, detect display devices ; Installing software from source code as well as using binary packages

UNIT III SERVER SETUP AND CONFIGURATION

10

Setting up email servers--using postfix (SMTP services), courier (IMAP & POP3 services), squirrel mail (web mail services) ; Setting up web servers --using apache (HTTP services), php (server-side scripting), perl (CGI support) ; Setting up file services --using samba (file and authentication services for windows networks), using NFS (file services for gnu/Linux / Unix networks) ; Setting up proxy services --using squid (http / ftp / https proxy services) ; Setting up printer services -using CUPS (print spooler), foomatic (printer database) ; Setting up a firewall -Using netfilter and iptables

57

UNIT IV PROGRAMMING TOOLS

12

Using the GNU Compiler Collection --GNU compiler tools ; the C preprocessor (cpp), the C compiler (gcc) and the C++ compiler (g++), assembler (gas) ; Understanding build systems --constructing make files and using make, using autoconf and autogen to automatically generate make files tailored for different development environments ; Using source code versioning and management tools --using cvs to manage source code revisions, patch & diff ; Understanding the GNU Libc libraries and linker -linking against object archives (.a libraries) and dynamic shared object libraries (.so libraries), generating statically linked binaries and libraries, generating dynamically linked libraries ; Using the GNU debugging tools --gdb to debug programs, graphical

debuggers like ddd, memory debugging / profiling libraries mpatrol and valgrind ;
Review of common programming practices and guidelines for GNU/Linux and FOSS ;
Introduction to Bash, sed & awk scripting

UNIT V APPLICATION PROGRAMMING

10

Basics of the X Windows server architecture ; Qt Programming ; Gtk+ Programming ;
Python Programming ; Programming GUI applications with localisation support.

CS9074 SOFTWARE AGENTS

L T P C

3 0 0 3

AIM:

This course aims at providing sufficient in depth knowledge in Software agents.

OBJECTIVES:

1. The student can well understand the philosophy and psychology of both human agents and software agents regarding co ordinations operation and communication.

2. Intelligent / Cognitive aspects are dealt with software knowledge support.

UNIT I AGENTS – OVERVIEW

9

Agent Definition – Agent Programming Paradigms – Agent Vs Object – Aglet – Mobile Agents – Agent Frameworks – Agent Reasoning.

UNIT II JAVA AGENTS

9

Processes – Threads- FIPA – ACL – DIA GAL– Daemons – Components – Java Beans – ActiveX – Sockets – RPCs – Distributed Computing – Aglets Programming – Jini Architecture – Actors and Agents – Typed and proactive messages.

UNIT III MULTIAGENT SYSTEMS

9

Reasoning about Multi agent Interaction between agents – Reactive English Agents Dutch – Combinational Spectrum – Cognitive Agents – Interaction protocols – Agent coordination – Agent negotiation – Agent Cooperation – Agent Organization – Self-Interested agents in Electronic Commerce Applications – Probabilistic Agents – Temporal Agents.

UNIT IV INTELLIGENT SOFTWARE AGENTS

9

Interface Agents – Agent Communication Languages – Agent Knowledge Representation – Agent Adaptability – Belief Desire Intension – Mobile Agent Applications- Argumentaic and Knowledge Sharing Agent.

UNIT V AGENTS AND SECURITY

9

Agent Security Issues – Mobile Agents Security – Protecting Agents against Malicious Hosts – Untrusted Agent – Black Box Security – Authentication for agents – Security issues for Aglets.

59

CS9047 ADHOC AND SENSOR NETWORKS

L T P C

3 0 0 3

AIM:

To provide a strong foundation in wireless adhoc networks and specialized adhoc networks like most networks and sensor networks.

OBJECTIVES:

- To understand the issues of MAC layer and routing protocols
- To study about the different types of adhoc routing protocols
- To learn about the QoS aware adhoc routing protocols
- To study about power and energy management in adhoc networks
- To understand the routing and models of mesh networks.
- To study about the architecture and protocols of wireless sensor networks

UNIT I ROUTING

9

Cellular and Ad hoc wireless networks – Issues of MAC layer and Routing – Proactive, Reactive and Hybrid Routing protocols – Multicast Routing – Tree based and Mesh based protocols – Multicast with Quality of Service Provision

UNIT II QUALITY OF SERVICE **9**

Real-time traffic support – Issues and challenges in providing QoS – Classification of QoS Solutions – MAC layer classifications – QoS Aware Routing Protocols – Ticket based and Predictive location based QoS Routing Protocols

UNIT III ENERGY MANAGEMENT AD HOC NETWORKS **9**

Need for Energy Management – Classification of Energy Management Schemes – Battery Management and Transmission Power Management Schemes – Network Layer and Data Link Layer Solutions – System power Management schemes

UNIT IV MESH NETWORKS **9**

Necessity for Mesh Networks – MAC enhancements – IEEE 802.11s Architecture – Opportunistic Routing – Self Configuration and Auto Configuration - Capacity Models – Fairness – Heterogeneous Mesh Networks – Vehicular Mesh Networks

UNIT V SENSOR NETWORKS **9**

Introduction – Sensor Network architecture – Data Dissemination – Data Gathering – MAC Protocols for sensor Networks – Location discovery – Quality of Sensor Networks – Evolving Standards – Other Issues – Recent trends in Infrastructure less Networks

TOTAL: 45 PERIODS

3. Thomas Krag and Sebastin Buettrich, ‘Wireless Mesh Networking’, O’Reilly Publishers, 2007.

AIM:

To understand the internals of a router and get an experience of designing such systems.

OBJECTIVES:

- To learn the functions of a router, and its architecture.
- To learn about Network processors – their architecture, programming issues, and design issues.

UNIT I ROUTING IN IP NETWORKS**9**

Static Routes – Dynamic Routes – RIP v1, RIP v2 – IGRP – EIGRP – SPF – Integrated IS-IS – IP Traffic engineering – Traffic, Stochasticity, Delay and Utilization – Application view – Architecture Framework – EGP, BGP routing.

UNIT II ROUTER ARCHITECTURE**9**

Function of Router – Types – Elements – Packet flow – Packet Processing - Algorithms And Data Structures (packet buffer allocation, etc) - Packet processing functions (Bridge Algorithm, Table Lookup And Hashing, etc)- Protocol Software (threads, Interrupts, etc) - Hardware Architectures For Protocol Processing - Classification And Forwarding – Switching Fabrics.

UNIT III NETWORK PROCESSORS**9**

Scalability With Parallelism And Pipelining - Complexity Of Network Processor Design (packet processing, ingress & egress processing, Macroscopic Data Pipelining And Heterogeneity etc) - Network Processor Architectures : architectural variety, Primary architectural characteristics, Packet Flow, Clock Rates, software architecture, Assigning Functionality To The Processor Hierarchy.

UNIT IV NP ARCHITECTURES**9**

Issues In Scaling A Network Processor (processing hierarchy and scaling)– examples of commercial Network Processors : Multi-Chip Pipeline, Augmented RISC Processor, Embedded Processor Plus Coprocessors, etc. - Design Tradeoffs and consequences (Programmability Vs. Processing Speed , speed vs functionality. etc).

UNIT V CASE STUDY – NP ARCHITECTURE AND PROGRAMMING**9**

Intel NP - Multithreaded Architecture Overview – Basic Features, External Connections, Internal components – Embedded RISC processor (instruction set, internal peripheral unit, User And Kernel Mode Operation) -Packet Processor Hardware (microsequencing, instruction set, etc) – memory interfaces – system and control interface components – Bus interface -Software Development Kit – IXP instruction set – MicroEngine Programming - thread synchronization – developing sample applications.

TOTAL:45 PERIODS

TEXT BOOKS:

1. Douglas E. Comer "Network System Design using Network Processors" Prentice Hall, 2006.
2. Deepankar Medhi, Karthikeyan Ramasamy, "Network Routing : Algorithms, Protocols, and Architecture", Elsevier, 2007.

61

IT9026 TCP/IP DESIGN AND IMPLEMENTATION

L T P C

3 0 0 3

AIM:

To study about the internetworking concepts and functionalities of TCP and IP software and to design data structures for implementing those functionalities.

OBJECTIVES:

- To understand the IP addressing schemes which provides the base for Layer 2 and Layer 3 header field detection, error reporting and dynamic address mapping.
- To develop data structures for basic protocol functions of TCP/IP and to understand and use the various members in the respective structures.
- To design and implement data structures for maintaining multiple local and global timers that will govern over various modules of TCP and IP software.

UNIT I INTRODUCTION 9

Internetworking concepts and architecture model – classful Internet address – CIDR – Subnetting and Supernetting – AARP – RARP- IP- IP Routing – ICMP – IPV6.

UNIT II TCP 9

Services – header – connection establishment and termination – interactive data flow – bulk data flow – timeout and retransmission – persist timer – keep alive timer – futures and performance.

UNIT III IP IMPLEMENTATION 9

IP global software organization – routing table – routing algorithms – fragmentation and reassembly – error processing (ICMP) – Multicast Processing (IGMP).

UNIT IV TCP IMPLEMENTATION I 9

Data structure and input processing – transmission control blocks – segment format – comparison – finite state machine implementation – Output processing – mutual exclusion – computing the TCP Data length.

UNIT V TCP IMPLEMENTATION II 9

Timers – events and messages – timer process – deleting and inserting timer event – flow control and adaptive retransmission – congestion avoidance and control – urgent data processing and push function.

TOTAL: 45 PERIODS

TEXT BOOKS

1. Douglas E Comer, "Internetworking with TCP/IP Principles, Protocols and Architecture", Vol 1 V edition 2006 and Vol 2, III Edition, 1999.
2. W.Richard Stevens "TCP/IP Illustrated" Vol 1. Pearson Education, 2003.

REFERENCES

1. Forouzan, "TCP/IP Protocol Suite" Second Edition, Tata MC Graw Hill, 2003.
2. W.Richard Stevens "TCP/IP Illustrated" Volume 2, Pearson Education 2003

AIM:

To provide some fundamental concepts in Software measurement and Metrics.

OBJECTIVE

- To be aware of Core metrics for product, quality, process
- To familiarize with the concepts of Software quality and tools for quality metrics
- To learn more about software reliability
- To understand important concepts of complexity metrics and OO metrics

UNIT I 9

IT Organization – the need for Metrics – Interpreting the Metrics – Managing the data – Acquiring IT Metrics Information – Limitations – Analysis of Old Data Vs New Data – Graphical Analysis – Core of Software Planning – Measuring Core Metrics (Product, Quality, Process Productivity) Work Output Measurements.

UNIT II 9

Software Development Process Models – Clean Room Methodology – Defect Prevention Process – Software Productivity Research Assessment- Malcolm Bridge Assessment – ISO 9000 – Software Quality Metrics – Defect Density – Customer Satisfaction Metrics – In Process Quality Metrics.

UNIT III 9

Metrics for Software Maintenance – Ishikawa’s seven basic tools – Their Use in Software Development – Defect Removal Effectiveness – Quality Planning – Cost Effectiveness of Phase Defect Removal – Quality Management Models – Rayleigh Model – Reliability Growth Model.

UNIT IV 9

Process Metrics for Software Testing – Test Progress Scurve Testing Defect Arrivals, backup, Overtime – CPU Utilization during test – Possible Metrics for Acceptance - Testing to Evaluate.

UNIT V 9

Complexity Metrics and Models – Lines of Code – Halstead Software Metrics –

Cyclomatic Complexity – Syntactic Constructs – Structure Metrics – OO Metrics – CK
OO Metric Suit – Productivity Metrics – Quality and Quality Management Metrics.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Stephen H. Kan, “ Metrics and Models In Software Quality Engineering”, First Edition, Pearson Education, 2003.
2. IT Measurement – A Practical Advice from the Experts”, International Function Point Users Group, Pearson Education, Asia,2002 (Unit I).

63

GE9021 PROFESSIONAL ETHICS IN ENGINEERING

L T P C

3 0 0 3

AIM:

To sensitize the engineering students on blending both technical and ethical

OBJECTIVES:

- Identify the core values that shape the ethical behavior of an engineer
- Utilize opportunities to explore one’s own values in ethical issues
- Become aware of ethical concerns and conflicts
- Enhance familiarity with codes of conduct
- Increase the ability to recognize and resolve ethical dilemmas

UNIT I ENGINEERING ETHICS

9

Senses of ‘Engineering Ethics’ – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg’s theory – Gilligan’s theory – Consensus and Controversy – Professions and Professionalism – Professional Ideals and Virtues – Uses of Ethical Theories

UNIT II ENGINEERING AS SOCIAL EXPERIMENTATION

9

Engineering as Experimentation – Engineers as responsible Experimenters – Research Ethics - Codes of Ethics – Industrial Standards - A Balanced Outlook on Law – The Challenger Case Study

UNIT III ENGINEER’S RESPONSIBILITY FOR SAFETY

9

Safety and Risk – Assessment of Safety and Risk – Riysis – Reducing Risk – The Government Regulator’s Approach to Risk - Chernobyl Case Studies and Bhopal

UNIT IV RESPONSIBILITIES AND RIGHTS**9**

Collegiality and Loyalty – Respect for Authority – Collective Bargaining –
Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights –
Employee Rights – Intellectual Property Rights (IPR) - Discrimination

UNIT V GLOBAL ISSUES**9**

Multinational Corporations – Business Ethics - Environmental Ethics – Computer
Ethics - Role in Technological Development – Weapons Development – Engineers as
Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors –
Honesty – Moral Leadership – Sample Code of Conduct

TOTAL:45 PERIODS**TEXT BOOKS:**

1. Mike Martin and Roland Schinzinger, “Ethics in Engineering”, McGraw Hill, New York (2005).
2. Charles E Harris, Michael S Pritchard and Michael J Rabins, “Engineering Ethics –
Concepts and Cases”, Thompson Learning, (2000).

REFERENCES:

1. Charles D Fleddermann, “Engineering Ethics”, Prentice Hall, New Mexico, (1999).
2. John R Boatright, “Ethics and the Conduct of Business”, Pearson Education, (2003)

4. Prof. (Col) P S Bajaj and Dr. Raj Agrawal, “Business Ethics – An Indian Perspective”, Biztantra, New Delhi, (2004)
5. David Ermann and Michele S Shauf, “Computers, Ethics and Society”, Oxford University Press, (2003)

64**GE9022 TOTAL QUALITY MANAGEMENT****L T P C****3 0 0 3****AIM :**

To Provide comprehensive knowledges about the principles, practices, tools and

techniques of Total Quality Management

OBJECTIVES :

- To Understand the various principles, practices of TQM to achieve quality
- To learn the various statistical approaches for quality control
- To understand the TQM tools for continuous process improvement
- To learn the important of ISO and Quality systems

UNIT I INTRODUCTION 9

Introduction - Need for quality - Evolution of quality - Definition of quality - Dimensions of manufacturing and service quality - Basic concepts of TQM - Definition of TQM – TQM Framework - Contributions of Deming, Juran and Crosby – Barriers to TQM.

UNIT II TQM PRINCIPLES 9

Leadership – Strategic quality planning, Quality statements - Customer focus Customer orientation, Customer satisfaction, Customer complaints, Customer retention - Employee involvement – Motivation, Empowerment, Team and Teamwork, Recognition and Reward, Performance appraisal - Continuous process improvement – PDSA cycle, 5s, Kaizen - Supplier partnership – Partnering, Supplier selection, Supplier Rating.

UNIT III TQM TOOLS & TECHNIQUES I 9

The seven traditional tools of quality – New management tools – Six-sigma: Concepts, methodology, applications to manufacturing, service sector including IT – Bench marking – Reason to bench mark, Bench marking process – FMEA – Stages, Types.

UNIT IV TQM TOOLS & TECHNIQUES II 9

Quality circles – Quality Function Deployment (QFD) – Taguchi quality loss function – TPM – Concepts, improvement needs – Cost of Quality – Performance measures.

UNIT V QUALITY SYSTEMS 9

Need for ISO 9000- ISO 9000-2000 Quality System – Elements, Documentation, Quality auditing- QS 9000 – ISO 14000 – Concepts, Requirements and Benefits – Case studies of TQM implementation in manufacturing and service sectors including IT.

TOTAL:45 PERIODS

65**GE9023 FUNDAMENTALS OF NANOSCIENCE****L T P C****3 0 0 3****AIM:**

To make the Students understand the importance, relevance and potentialities of this emerging field of study

OBJECTIVES:

- Study the basic nano technology and Nanoscience.
- Understand interdisciplinary nature of this field
- Understand the important role of physics, chemistry, biology
- Recognize that the rules of nano science are fundamentally different than those we experience
- Study the basic fabrication strategies of nano science

UNIT I INTRODUCTION**10**

Nanoscale Science and Technology- Implications for Physics, Chemistry, Biology and Engineering- Classifications of nanostructured materials- nano particles- quantum dots, nanowires-ultra-thin films-multilayered materials. Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties.

Introduction to properties and motivation for study (qualitative only)

UNIT II PREPARATION METHODS **10**

Bottom-up Synthesis-Top-down Approach: Precipitation, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE.

UNIT III PATTERNING AND LITHOGRAPHY FOR NANOSCALE DEVICES **5**

Introduction to optical/UV electron beam and X-ray Lithography systems and processes, Wet etching, dry (Plasma /reactive ion) etching, Etch resists-dip pen lithography

UNIT IV PREPARATION ENVIRONMENTS **10**

Clean rooms: specifications and design, air and water purity, requirements for particular processes, Vibration free environments: Services and facilities required. Working practices, sample cleaning, Chemical purification, chemical and biological contamination, Safety issues, flammable and toxic hazards, biohazards.

UNIT V CHARACTERISATION TECHNIQUES **10**

X-ray diffraction technique, Scanning Electron Microscopy - environmental techniques, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques- AFM, SPM, STM, SNOM, ESCA, SIMS-Nanoindentation

TOTAL:45 PERIODS

TEXT BOOKS:

1. A.S. Edelstein and R.C. Cammearata, eds., "Nanomaterials: Synthesis, Properties and Applications", Institute of Physics Publishing, Bristol and Philadelphia, 1996.
2. N John Dinardo, "Nanoscale characterisation of surfaces & Interfaces", 2nd Edition, Weinheim Cambridge, Wiley-VCH, 2000

REFERENCES:

1. G Timp (Editor), "Nanotechnology", AIP press/Springer, 1999
2. Akhlesh Lakhtakia (Editor), "The Hand Book of Nano Technology, Nanometer Structure", Theory, Modeling and Simulations", Prentice-Hall of India (P) Ltd, New Delhi, 2007.

AIM:

To understand that User Interface Design is as important as Functionality Design to study the basic principles User-Centered Design

OBJECTIVES:

- To study the basic characteristics of graphics and web interfaces
- To study the basics of Human Computer Interaction
- To study the basics of WIMP interfaces
- To study the multimedia interfaces for the web
- To study the principles of evaluating interfaces

UNIT I INTRODUCTION**8**

Human – Computer Interface – Characteristics Of Graphics Interface – Direct Manipulation Graphical System – Web User Interface –Popularity –Characteristic & Principles.

UNIT II HUMAN COMPUTER INTERACTION**7**

User Interface Design Process – Obstacles –Usability –Human Characteristics In Design – Human Interaction Speed –Business Functions –Requirement Analysis – Direct – Indirect Methods – Basic Business Functions – Design Standards – General Design Principles – Conceptual Model Design – Conceptual Model Mock-Ups

UNIT III WINDOWS**12**

Characteristics– Components– Presentation Styles– Types– Managements– Organizations– Operations– Web Systems– System Timings - Device– Based Controls Characteristics– Screen – Based Controls — Human Consideration In Screen Design – Structures Of Menus – Functions Of Menus– Contents Of Menu– Formatting – Phrasing The Menu – Selecting Menu Choice– Navigating Menus– Graphical Menus. Operate Control – Text Boxes– Selection Control– Combination Control– Custom Control– Presentation Control.

UNIT IV MULTIMEDIA**9**

Text For Web Pages – Effective Feedback– Guidance & Assistance– Internationalization– Accessibility– Icons– Image– Multimedia – Coloring.

UNIT V EVALUATION

9

Conceptual Model Evaluation – Design Standards Evaluation – Detailed User Interface Design Evaluation

TOTAL:45 PERIODS

TEXT BOOKS:

1. Wilbent. O. Galitz ,“The Essential Guide To User Interface Design”, John Wiley& Sons, 2001.
2. Deborah Mayhew, “The Usability Engineering Lifecycle”, Morgan Kaufmann, 1999 (UNIT II and V)

REFERENCES:

67

IT9029 SOFTWARE QUALITY ASSURANCE

L T P C

3 0 0 3

AIM:

To learn the importance of Software Quality Assurance.

OBJECTIVES:

- To study the concepts of Software Quality Assurance
- To learn about Managing Software Quality
- To study and learn how to apply Software Quality Assurance metrics and analysis techniques
- To study Software Quality Program and Planning
- To get acquainted with Software Quality Assurance Standardization

UNIT I FUNDAMENTALS OF SOFTWARE QUALITY ASSURANCE

9

The Role of SQA – SQA Plan – SQA considerations – SQA people – Quality Management – Software Configuration Management

UNIT II MANAGING SOFTWARE QUALITY

9

Managing Software Organizations – Managing Software Quality – Defect Prevention –

Software Quality Assurance Management

UNIT III SOFTWARE QUALITY ASSURANCE METRICS 9

Software Quality – Total Quality Management (TQM) – Quality Metrics – Software Quality Metrics Analysis

UNIT IV SOFTWARE QUALITY PROGRAM 9

Software Quality Program Concepts – Establishment of a Software Quality Program – Software Quality Assurance Planning – An Overview – Purpose & Scope.

UNIT V SOFTWARE QUALITY ASSURANCE STANDARDIZATION 9

Software Standards–ISO 9000 Quality System Standards - Capability Maturity Model and the Role of SQA in Software Development Maturity – SEI CMM Level 5 – Comparison of ISO 9000 Model with SEI’s CMM

TOTAL:45 PERIODS

TEXT BOOKS:

1. Mordechai Ben-Menachem / Garry S Marliss, “Software Quality”, Vikas Publishing House, Pvt, Ltd., New Delhi.(UNIT III to V)
2. Watts S Humphrey, “ Managing the Software Process”, Pearson Education Inc.(UNIT I and II)

2. Nina S Godbole, “Software Quality Assurance: Principles and Practice”, Alpha Science International, Ltd, 2004

68

IT9030 KNOWLEDGE ENGINEERING

L T P C

3 0 0 3

UNIT I INTRODUCTION

9

Knowledge Representation and Reasoning – First order Logic – Syntax, Semantics Pragmatics – Expressing Knowledge – Levels of Representation – Knowledge Acquisition and Sharing – Sharing Ontologies – Language Ontologies –Language Patterns – Tools for Knowledge Acquisition

UNIT II RESOLUTION AND REASONING

9

Proportional Case – Handling Variables and Qualifies – Dealing with Intractability – Reasoning with Horn Clauses - Procedural Control of Reasoning – Rules in Production – Description Logic - Issues in Engineering -Vivid Knowledge – Beyond Vivid.

UNIT III REPRESENTATION 9

Object Oriented Representations – Frame Formalism – Structured Descriptions – Meaning and Entailment - Taxonomies and Classification – Inheritance – Networks – Strategies for Defeasible Inheritance – Formal Account of Inheritance Networks.

UNIT IV DEFAULTS, UNCERTAINTY AND EXPRESSIVENESS 9

Defaults – Introduction – Closed World Reasoning – Circumscription – Default Logic Limitations of Logic – Fuzzy Logic – Nonmontonic Logic – Theories and World – Semiotics – Auto epistemic Logic - Vagueness – Uncertainty and Degrees of Belief – Noncategorical Reasoning – Objective and Subjective Probability.

UNIT V ACTIONS AND PLANNING 9

Explanation and Diagnosis – Purpose – Syntax, Semantics of Context – First Order Reasoning – Modal Reasoning in Context – Encapsulating Objects in Context – Agents – Actions – Situational Calculus – Frame Problem – Complex Actions – Planning – Strips – Planning as Reasoning – Hierarchical and Conditional Planning.

TOTAL:45 PERIODS

TEXT BOOKS:

1. Ronald Brachman, Hector Levesque “Knowledge Representation and Reasoning “, The Morgan Kaufmann Series in Artificial Intelligence 2004
2. John F. Sowa, “ Knowledge Representation: Logical, Philosophical, and Computational Foundations”, 2000

69

CS9043 MULTI - CORE PROGRAMMING

L T P C

3 0 0 3

AIM:

To learn about the techniques useful for programming parallel architectures in general

and multi-core processors in particular.

OBJECTIVES:

- To realize the difference between programming for serial processors and parallel processors.
- To understand the challenges in parallel and multi-threaded programming.
- To learn about the various parallel programming paradigms, and solutions.

UNIT I INTRODUCTION TO MULTIPROCESSORS AND SCALABILITY ISSUES 9

Scalable design principles – Principles of processor design – Instruction Level Parallelism, Thread level parallelism. Parallel computer models – Symmetric and distributed shared memory architectures – Performance Issues – Multi-core Architectures - Software and hardware multithreading – SMT and CMP architectures – Design issues – Case studies – Intel Multi-core architecture – SUN CMP architecture.

UNIT II PARALLEL PROGRAMMING 9

Fundamental concepts – Designing for threads. Threading and parallel programming constructs – Synchronization – Critical sections – Deadlock. Threading APIs.

UNIT III OPENMP PROGRAMMING 9

OpenMP – Threading a loop – Thread overheads – Performance issues – Library functions. Solutions to parallel programming problems – Data races, deadlocks and livelocks – Non-blocking algorithms – Memory and cache related issues.

UNIT IV MPI PROGRAMMING 9

MPI Model – collective communication – data decomposition – communicators and topologies – point-to-point communication – MPI Library.

UNIT V MULTITHREADED APPLICATION DEVELOPMENT 9

Algorithms, program development and performance tuning.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Shameem Akhter and Jason Roberts, “Multi-core Programming”, Intel Press, 2006.
2. Michael J Quinn, Parallel programming in C with MPI and OpenMP, Tata Mcgraw Hill, 2003.

REFERENCES:

70

CS9045 PROGRAMMING IN .NET

L T P C

3 0 0 3

AIM:

To enable the student to use the advanced features of C# programming in the .NET framework.

OBJECTIVES:

- To study and implement applications using the Presentation Foundation.
- To study the features associated with enterprise services.
- To create distributed applications using Web services and remoting.
- To study the features of the Workflow Foundation
- To introduce the concepts of the Compact Framework.

UNIT I

9

Windows Presentation Foundation – Overview – Event Handling – Data Binding – Windows Forms Integration – ASP.NET Introduction - ADO.NET and Data Binding – ASP.NET Development - Custom Controls – Master Pages – Site Navigation – Security – Themes – Web Parts - ASP.NET AJAX

UNIT II

9

Communication – Web Services with ASP.NET – SOAP, WSDL, Web Services - .NET Remoting - .NET Remoting Architecture - .NET Remoting Features – Mobile Web Services

UNIT III

9

Enterprise Services – Overview – COM+ Application – Message Queuing

UNIT IV

9

Windows Workflow Foundation – Activities – Custom Activities – Workflows – Workflow Services – Hosting Workflows – Directory Services – Architecture –

Administration Tools

UNIT V

9

.NET Compact Framework – Compact Edition Data Stores – Errors, Testing and Debugging – Optimizing performance – Packaging and Deployment – Networking and Mobile Devices – Security

TOTAL:45 PERIODS

TEXT BOOKS:

1. Christian Nagel et al. “Professional C# 2005 with .NET 3.0”, Wiley India , 2007
2. Andy Wigley, Daniel Moth, Peter Foot, “Mobile Development Handbook”, Microsoft Press, 2007.

REFERENCES:

1. Andrew Troelson, “Pro C# with .NET 3.0”, Apress, 2007.
2. Kevin Hoffman, “Visual C# 2005”, Pearson Education, 2006.
3. Justin Smith, “Inside Windows Communication Foundation”, Microsoft Press, 2007.

71

IT9031 NETWORK PROGRAMMING AND MANAGEMENT

L T P C

3 0 0 3

AIM:

To understand the features of network sockets and to learn socket programming.

OBJECTIVES:

- To introduce TCP and UDP Sockets
- To explain the issues in the development of server software
- To discuss routing sockets, raw sockets and other advanced sockets
- To develop standard network applications
- To develop network management utilities in Layer 2 and Layer 3

UNIT I INTRODUCTION

9

Overview of TCP/IP – Client/Server Paradigm – Program Interface to Protocols – Socket Abstraction and Address Structure – Construction of messages – Byte ordering and Address conversion functions – Client software design – Issues in Server Design – I/O Multiplexing – Select and Poll functions – TCP and UDP Sockets

UNIT II CLIENT/SERVER DESIGN

9

Simple Client/Server Applications using TCP and UDP sockets – Echo, Daytime, Time applications – Iterative Servers using TCP and UDP sockets – Process Structure – Concurrent Connection Oriented Servers – Concurrent UDP servers – Multiprotocol and Multiservice servers

UNIT III ADVANCED SOCKETS 9

Routing Sockets – Broadcasting and Multicasting – Advanced UDP sockets – Out of band data – Threads, Threaded servers – Raw Sockets – Signal driven I/O – IPv4 and IPv6 Interoperability – Daemon processes – Advanced I/O functions – Non blocking I/O – Mutexes and Condition variables

UNIT IV APPLICATION DEVELOPMENT 9

Application Level Gateways – Remote Procedure Call – Distributed Program Generation – Network File System – Mail server and client – TELNET – FTP client/server – Web Server – Simple DNS Application

UNIT V NETWORK MANAGEMENT 9

DNS MX client application – Development of Ping Utility – WHOIS query – IP level network tapping – Layer 2 Network Tapping

TOTAL:45 PERIODS

TEXT BOOKS:

1. W. Richard Stevens, “Unix Network Programming – Vol I”, Second Edition, Pearson Education, 1998
2. D.E Comer and David L Stevens, “TCP/IP Illustrated – Vol III”, Second Edition, Pearson Education, 1996.

72

IT9032 ENTERPRISE RESOURCE PLANNING L T P C

3 0 0 3

AIM:

The student understands the basic concepts of Enterprise Resource Planning and its role in improving the business dynamics.

OBJECTIVES:

- To provide an integrated view of various facets of business, including planning, manufacturing, sales, finance and marketing.

- To understand the development of software to integrate business activities such as inventory management and control, order tracking, customer service, finance and human resources.
- To become aware of the software applications and tools that are available to business to use to drive out costs and improve efficiency.
- To understand the paths and pitfalls of the implementation process

UNIT I INTRODUCTION TO ERP 9

Overview – Benefits of ERP – ERP and Related Technologies – Business Process Reengineering – Data Warehousing – Data Mining – On-line Analytical Processing – Supply Chain Management.

UNIT II ERP IMPLEMENTATION 9

Implementation Life Cycle – Implementation Methodology – Hidden Costs – Organizing Implementation – Vendors, Consultants and Users – Contracts – Project Management and Monitoring.

UNIT III BUSINESS MODULES 9

Business Modules in an ERP Package – Finance – Manufacturing – Human Resource – Plant Maintenance – Materials Management – Quality Management – Sales and Distribution.

UNIT IV ERP MARKET 9

ERP Market Place – SAP AG – PeopleSoft – Baan Company – JD Edwards World Solutions Company – Oracle Corporation – QAD – System Software Associates.

UNIT V ERP – PRESENT AND FUTURE 9

Turbo Charge the ERP System – EIA – ERP and E-Commerce – ERP and Internet – Future Directions in ERP.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Alexis Leon, “ERP Demystified”, Tata McGraw Hill, 1999.
2. Joseph A. Brady, Ellen F. Monk, Bret J. Wangner, “Concepts in Enterprise Resource Planning”, Thomson Learning, 2001.

REFERENCES:

1. Vinod Kumar Garg and N.K .Venkata Krishnan, “Enterprise Resource

Planning – concepts and Planning”, Prentice Hall, 1998.

2. Jose Antonio Fernandez, “ The SAP R /3 Hand book”, Tata McGraw Hill, 1998.

3. Fu, “SAP BW: A Step by Step Guide”, First Edition, Pearson Education, 2003.

73

IT9033 SOFTWARE DESIGN AND ARCHITECTURE

L T P C

3 0 0 3

AIM:

To provide an overview of Service Oriented Architecture and enable the student to create applications in a collaborative environment.

OBJECTIVES:

- To study the importance of Service Oriented Architecture.
- Implementation of SOA in the Java and .NET frameworks.
- To study the advanced features of SOA.

UNIT I

9

Nature of design process – Characteristics of design activities, Essential elements of design-Factors affecting design quality - Design Quality models – Design principles – Notion of Software architecture – Simple case studies.

UNIT II

9

Description of software Architectures – Architectural design space – Scenario based analysis and evaluation – SAAM and ATAM methods - formalizing the architectural styles – Tools for architectural design.

UNIT III

9

Describing the detailed design – Design representations – rationale for software design methods- Design process – Simple design Practices – Stepwise refinement, Incremental design.

UNIT IV

9

Structured system analysis and Structured design – Jackson structured Programming and Development.

UNIT V

9

Object concept – Component based development – Formal approach to design – Design patterns- Design Review.

TOTAL:45 PERIODS

TEXT BOOKS:

1. Hong Zhu, “Software Design Methodology – From principles to Architectural styles”, Elsevier, 2006.
2. Mary Shaw and David Garlan, 'Software Architecture – Perspectives on an emerging Discipline”, PHI, 2003. (UNIT I and II)
3. David Budgen, “Software Design”, Pearson Education, 2004.
(UNIT –III to V)
4. Bass, L., Clements P. and Kazman, R., “Software Architecture in Practice, Addison Wesley, 1998.

74

IT9034 BUSINESS PROCESS MODEL

L T P C

3 0 0 3

AIM:

To understand the way the dynamics of a business are modeled with processes

OBJECTIVES:

- To understand the internal business processes
- To understand the external business processes
- To study the basics of business process modeling
- To understand the nature of large processes
- To study the methods for managing the process

UNIT I UNDERSTANDING BUSINESS PROCESS

9

Organizations as Systems, Effective Operations Management, Adding Value, Competing on Capabilities, Value Chain and Competitive Advantage

UNIT II CUSTOMER AND MATERIALS PROCESSING

9

Marketing in a Changing World, Relationship Marketing, Purchasing, Concept of a Manufacturing System, Logistics and Competitive Strategy, Reverse Logistics, The triumph of Process

UNIT III PROCESS MODELING

9

Process Modeller’s Needs, Basic Concepts in Process Modeling, Modeling with RADS, Animating a Process

UNIT IV LARGE PROCESSES **9**

Micro-Modeling of Processes, Modeling Large Processes, Process Patterns.

UNIT V MANAGING THE MODELING **9**

Modeling the Materials in the Process, Analyzing a Process Model, Managing the Modeling

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Davis Barnes (Editor), "Understanding Business: Process", Routledge, USA, 2000
[UNITS 1, 2]
2. Martyn A Ould, "Business Processes: Modelling and Analysis for Re-Engineering and Improvement", John Wiley & Sons, USA, 1995 UNITS 3, 4, 5]

REFERENCES:

75

IT9035 SOFT COMPUTING

L T P C

3 0 0 3

AIM:

To give an overall understanding on the theories that are available to solve hard realworld problems

OBJECTIVES:

- To give the students an overall knowledge of soft computing theories and fundamentals

- To give an understanding on the fundamentals of non-traditional technologies and approaches to solving hard real-world problems
- Fundamentals of artificial neural networks, fuzzy sets and fuzzy logic and genetic algorithms.
- Use of ANN, Fuzzy sets to solve hard real-world problems
- To given an overview of Genetic algorithms and machine learning techniques to solving hard real-world problems
- To study about the applications of these areas

UNIT I INTRODUCTION 9

Evolution of Computing - Soft Computing Constituents – From Conventional AI to Computational Intelligence – Neural Networks - Scope and Evolution – Models of Neural Networks – Feed forward Networks – Supervised Learning Neural Networks – Associative memory networks – Unsupervised learning networks – Special Networks

UNIT II FUZZY SETS AND FUZZY LOGIC 9

Fuzzy Sets – Operations on Fuzzy Sets – Fuzzy Relations - Fuzzy Rules Non – interactive fuzzy sets – Fuzzification– Intuition , inference, Rank ordering – uzzification – Max-membership principle, centroid method, center of sums, center of largest area.

UNIT III FUZZY MEASURES AND REASONING 9

Fuzzy arithmetic and measures – Fuzzy reasoning – approximate reasoning – categorical, qualitative, syllogistic, dispositional – Fuzzy inference systems – fuzzy decision making – individual, multiperson, multi objective, Bayesian – fuzzy logic control system – architecture, model and application

UNIT IV MACHINE LEARNING AND GENETIC ALGORITHM 9

Machine Learning Techniques – Machine Learning Using Neural Nets – Genetic Algorithms (GA) – Simple and General GA – Classification of Genetic Algorithm – Messy, Adaptive, Hybrid, Parallel – Holland Classifier System

UNIT V APPLICATION AND IMPLEMENTATION SOFT COMPUTING 9

Genetic algorithms -. Traveling Salesperson Problem, Internet Search Techniques – Fuzzy Controllers – Bayesian Belief networks for Rocket Engine Control - Neural Network, Genetic algorithm and Fuzzy logic implementation in C++ and Matlab

TOTAL:45 PERIODS

CS9044 BIO INFORMATICS

L T P C

3 0 0 3

AIM:

By using the well-tested and successful approach of problem-based learning, students will learn through applying the strategies and tools used in bioinformatics to topical problems drawn from ongoing research and applications in a variety of fields.

OBJECTIVES:

- To emphasize how to use the computer as a tool for biomedical research.
- To understand the use of Databases and Data mining concepts in the field of biology
- To study and understand the various modeling techniques that are used for modeling biological data
- To explore visualization techniques for DNA and RNA molecules

- To be aware of the microarray technology for genome expression study

UNIT I INTRODUCTION 9

Need for Bioinformatics technologies – Overview of Bioinformatics technologies – Structural bioinformatics – Data format and processing – secondary resources and applications – Role of Structural bioinformatics - Biological Data Integration System.

UNIT II DATAWAREHOUSING AND DATAMINING IN BIOINFORMATICS 9

Bioinformatics data – Datawarehousing architecture – data quality – Biomedical data analysis – DNA data analysis – Protein data analysis – Machine learning – Neural network architecture and applications in bioinformatics

UNIT III MODELING FOR BIOINFORMATICS 9

Hidden markov modeling for biological data analysis – Sequence identification – Sequence classification – multiple alignment generation – Comparative modeling – Protein modeling – genomic modeling – Probabilistic modeling – Bayesian networks – Boolean networks - Molecular modeling – Computer programs for molecular modeling

UNIT IV PATTERN MATCHING AND VISUALIZATION 9

Gene regulation – motif recognition – motif detection – strategies for motif detection – Visualization – Fractal analysis – DNA walk models – one dimension – two dimension – higher dimension – Game representation of Biological sequences – DNA, Protein, Amino acid sequences.

77

UNIT V MICROARRAY ANALYSIS 9

Microarray technology for genome expression study – image analysis for data extraction – preprocessing – segmentation – gridding – spot extraction – normalization, filtering – cluster analysis – gene network analysis – Compared Evaluation of Scientific Data Management Systems – Cost Matrix – Evaluation model - Benchmark - Tradeoffs

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Yi-Ping Phoebe Chen (Ed), “BioInformatics Technologies”, First Indian Reprint, Springer Verlag, 2007.
2. Zoe Iacox and Terence Critchlow, “BioInformatics – Managing Scientific data”,

First Indian Reprint, Elsevier, 2004

IT9036 MANAGEMENT INFORMATION SYSTEMS

L T P C

3 0 0 3

AIM:

To understand the design, development and management of information systems.

OBJECTIVES:

- To know the basics of managing the information
- To understand the design, development and maintenance of information systems.
- To understand basic issues in knowledge management and information systems.

UNIT I INFORMATION SYSTEM AND ORGANIZATION

9

Matching the Information System Plan to the Organizational Strategic Plan – Identifying Key Organizational Objective and Processes and Developing an Information System Development – User role in Systems Development Process – Maintainability and Recoverability in System Design.

UNIT II REPRESENTATION AND ANALYSIS OF SYSTEM STRUCTURE

9

Models for Representing Systems: Mathematical, Graphical and Hierarchical (Organization Chart, Tree Diagram) – Information Flow – Process Flow – Methods and Heuristics – Decomposition and Aggregation – Information Architecture – Application of System Representation to Case Studies.

UNIT III SYSTEMS, INFORMATION AND DECISION THEORY

9

Information Theory – Information Content and Redundancy – Classification and Compression – Summarizing and Filtering – Inferences and Uncertainty – Identifying Information needed to Support Decision Making – Human Factors – Problem characteristics and Information System Capabilities in Decision Making.

UNIT IV INFORMATION SYSTEM APPLICATION**9**

Transaction Processing Applications – Basic Accounting Application – Applications for Budgeting and Planning – Other use of Information Technology: Automation – Word Processing – Electronic Mail – Evaluation Remote Conferencing and Graphics – System and Selection – Cost Benefit – Centralized versus Decentralized Allocation Mechanism.

UNIT V DEVELOPMENT AND MAINTENANCE OF INFORMATION SYSTEMS**9**

Systems analysis and design – System development life cycle – Limitation – End User Development – Managing End Users – off- the shelf software packages – Outsourcing – Comparison of different methodologies.

TOTAL:45 PERIODS**TEXT BOOKS:**

1. Laudon K.C, Laudon J.P, Brabston M.E, “Management Information Systems - Managing the digital firm”, Pearson Education, 2004.

REFERENCES:

1. Turban E.F, Potter R.E, “Introduction to Information Technology”; Wiley, 2004.
2. Jeffrey A.Hoffer, Joey F.George, Joseph S. Valachich, “Modern Systems Analysis and Design”, Third Edition, Prentice Hall, 2002.

IT9038 COMPUTER GRAPHICS**L T P C****3 0 0 3****AIM:**

Introduce concepts of low level imaging and Graphics primitives

Introduce students to the theory implementation and application of modern computer graphics techniques

Introduce application of computer graphics techniques to selected problems in Modeling, Rendering, Interaction and Animation

OBJECTIVES:

The students will be able to understand all graphics primitives, two dimensional and three dimensional object creation and manipulation techniques

Students will have clear knowledge about Graphics programming concepts

Students will gain knowledge on Fractal based objects and Shading, Shadowing and Rendering Techniques.

UNIT I 2D PRIMITIVES **9**

Output primitives – Line, Circle and Ellipse drawing algorithms - Attributes of output primitives – Two dimensional Geometric transformation - Two dimensional viewing – Line, Polygon, Curve and Text clipping algorithms

UNIT II 3D CONCEPTS **9**

Parallel and Perspective projections - Three dimensional object representation – Polygons, Curved lines, Splines, Quadric Surfaces,- Visualization of data sets - 3D transformations – Viewing -Visible surface identification.

79

UNIT III GRAPHICS PROGRAMMING **9**

Color Models – RGB, YIQ, CMY, HSV – Animations – General Computer Animation, Raster, Keyframe - Graphics programming using OPENGL – Basic graphics primitives – Drawing three dimensional objects - Drawing three dimensional scenes

UNIT IV RENDERING **9**

Introduction to Shading models – Flat and Smooth shading – Adding texture to faces – Adding shadows of objects – Building a camera in a program – Creating shaded objects – Rendering texture – Drawing Shadows.

UNIT V FRACTALS **9**

Fractals and Self similarity – Peano curves – Creating image by iterated functions – Mandelbrot sets – Julia Sets – Random Fractals – Overview of Ray Tracing – Intersecting rays with other primitives – Adding Surface texture – Reflections and Transparency – Boolean operations on Objects

TOTAL:45 PERIODS

TEXT BOOKS:

1. Donald Hearn, M.Pauline Baker, Computer Graphics – C Version, second edition, Pearson Education,2004.
2. F.S. Hill, Computer Graphics using OPENGL, Second edition, Pearson Education,2003.

REFERENCES:

IT9039 WIRELESS COMMUNICATIONS

L T P C

3 0 0 3

AIM:

Wireless technology has become the most exciting area in telecommunications and networking. The rapid growth of mobile telephone use, various satellite services, and now the wireless Internet and wireless LANs are generating tremendous changes in telecommunications and networking. The aim is to provide the learner with a basic understanding of the various IMT-2000 based 3rd generation radio and network technologies and their respective deployment and migration options.

OBJECTIVES:

- To introduce the underlying technologies of wireless communication.
- To explain the benefits and limitations of various techniques for providing multiple users access to scarce radio spectrum resources.
- To provide a detailed study of the four generations of wireless cellular and mobile telephony, technologies, applications and other issues.

UNIT I

9

Overview-Principles of CDMA-Radio channel access- Spread Spectrum-Power control-Handovers-Wideband CDMA Air interface- Physical layer-FEC encoding/decoding-Error detection-Frequency and time synchronization- Channels-Spreading and scrambling codes- Diversity.

80

UNIT II

9

Modulation techniques and spread spectrum- Spreading techniques- Codes- Channel coding – Wideband CDMA air interface- Protocol stack- Media Access Control (MAC)- Radio Link control (RLC)- Radio Resource Control (RRC) – User plane – PDC protocol- Data protocols.

UNIT III

9

UMTS network structure- Core network- UMTS Radio access network – GSM Radio

access network- Interfaces – Network Protocols.New concepts in UMTS Network –
Location services-Opportunity driven multiple access – Multimedia Messaging services
– Gateway location register – Support of localized service area.

UNIT IV **9**

3G services – Service categories – Tele services Bearer services – Supplementary
services – Service capabilities – QoS classes – 3G Applications.Introduction to IMS,
Architecture – CSCF – Media gateway – Application Servers – IMS Protocols: SIP,
RTP/RTCP and other IMS protocols – IMS Services.

UNIT V **9**

Introduction to 4G networks - DVB-H - Wireless Local Loop (WLL) WLL Architecture,
WLL Technologies and frequency spectrum, WLL products, LMDS

TOTAL: 45 PERIODS

TEXT BOOKS: 1. Juha Korhonen, “Introduction to 3G Mobile communications”, Artech
House, 2001,

(Unit 1,2,3)

2. Miikka Poikselka, Aki Niemi, Hisham Khartabil, Georg Mayer, The IMS: IP
Multimedia Concepts and Services, 2nd Edition John Wiley & Sons 2006, (Unit 4)

3. Jeffrey G. Andrews Fundamentals of WiMAX: Understanding Broadband Wireless
Networking, Prentice Hall, 2007, (Unit 5)

REFERENCES:

1. Clint Smith, Daniel Collins, Daniel Collins, 3G Wireless Networks, McGraw-Hill
Companies, 2006

2. Garg.V.K "IS-95 CDMA and cdma 2000", first Indian reprint 2002, Pearson
Education

3. Heikki Kaaranen, Siamäk Naghian, Lauri Laitinen, Ari Ahtiainen , Valtteri Niemi,
UMTS Networks: Architecture, Mobility and Services, John Wiley & Sons; 1st
edition 2001

4. Frank Ohrtman, WiMAX Handbook, McGraw-Hill Professional; 1 edition 2005

AIM:

To explain the requirements of a network to support multimedia applications and possible solutions to be included in TCP/IP network.

OBJECTIVES:

- To understand the limitations of TCP/IP networks in the context of multimedia communication
- To study about the various network level solutions
- To study about the various end-to-end solutions
- To learn multimedia Communication in wireless networks
- To study about various multimedia communication standards

UNIT I LIMITATIONS OF TCP/IP NETWORKS 9

Success of the Internet – Best Effort Service model – Advantages and limitations of best Effort Model – Possible enhancements over TCP/IP – Characteristics and Expectations of Multimedia Applications – Quality of Service – Guaranteed Service Model

UNIT II NETWORK LEVEL SOLUTIONS 9

Integrated Services Architecture – Traffic Shaping – Resource Reservation – Admission Control – Differentiated Services Architecture – Per Hop Behavior – ATM Networks – MPLS networks – QoS Aware Routing – Open loop congestion control schemes – Content Distribution Networks – MBONE networks

UNIT III END TO END SOLUTIONS 9

Different Streaming Architectures – RTSP – Functions of a Media Player and Media Server – Forward correction Techniques – RTP and RTCP – Voice over IP – Principles and Applications - H.323 and SIP Standards – XTP Standard

UNIT IV MULTIMEDIA OVER WIRELESS NETWORKS 9

Bandwidth adaptation techniques – Scalable Video Coding for Adaptive Straming applications – Channel Modeling and Wireless Internet – Cross layer Wireless Multimedia – QoS support in Wireless Environment

UNIT V MULTIMEDIA COMMUNICATION STANDARDS 9

Audio/Video Streams – Video Encoding Standards – Speech Encoding Standards –
Multimedia multiplexing and Synchronization – Audio/Video Compression Standards

TOTAL:45 PERIODS TEXT BOOKS:

1. William Stallings, “High Speed Networks and Internets – Performance and Quality of Service”, Second Edition, Pearson Education, 2002.
2. James F Kurose and Keith W Ross, “Computer Networking: A Top Down Approach Featuring the Internet”, Second Edition, Pearson Education, 2003.

IT9041 DOMAIN ENGINEERING

L T P C
3 0 0 3

AIM:

To understand the methods and tools for identifying and Representing the commonalities across different domains

OBJECTIVES:

- To study the basic principle sof domain analysis and scoping
- To understand some domain engineering methods
- To understand the principles of modeling the features
- To understand the concepts of generative programming
- To study the languages and tools used for domain engineering

UNIT I DOMAIN ANALYSIS AND SCOPING

9

Domain Analysis. Domain Design and Domain Implementation. Application Engineering. Product-Line Practices. Key Domain Engineering Concepts. Domain. Domain Scope and Scoping. Relationships between Domains. Features and Feature Models. Method Tailoring and Specialization. Survey of Domain Analysis and Domain

Engineering Methods

UNIT II DOMAIN ENGINEERING METHODS 9

Feature-Oriented Domain Analysis (FODA). FODA Process. Organization Domain Modeling (ODM). The ODM Process. Draco. Capture. Domain Analysis and Reuse Environment (DARE). Domain-Specific Software Architecture (DSSA) Approach, Algebraic Approach. Other Approaches. Domain Engineering and Related Approaches.

UNIT III FEATURE MODELING 9

Feature Modeling. Feature Models. Feature Diagrams. Mandatory Features. Optional Features. Alternative Features. Or-Features. Normalized Feature Diagrams. Expressing Commonality in Feature Diagrams. Expressing Variability in Feature Diagrams. Other Information Associated with Feature Diagrams in a Feature Model. Assigning Priorities to Variable Features. Availability Sites, Binding Sites, and Binding Modes. Sites. Availability Sites. Binding Sites and Binding Modes. Relationship between Optimizations and Availability Sites, Binding Sites, and Binding Modes.

UNIT IV GENERATIVE PROGRAMMING 9

Generative Domain Models. Main Development Steps in Generative Programming. Adapting Domain Engineering for Generative Programming. Domain-Specific Languages. DEMRAL: Example of a Domain Engineering Method for Generative Programming. Outline of DEMRAL. Domain Analysis. Domain Definition. Domain Modeling. Identification of Key Concepts. Feature Modeling. Feature Starter Set for ADTs. Feature Starter Set for Algorithms. Domain Design. Scope Domain Model for Implementation. Identify Packages.

UNIT V LANGUAGES AND TOOLS 9

Hume, DSL Paradigm, Stratego/XT, Run-time Code Generation in C++.

TOTAL: 45 PERIODS TEXT BOOKS:

1. Czarnecki Krzysztof, Eisencker Ulrich, Generative programming: methods, tools and applications, Lavoisier, 2000.
2. C. Lengauer, Domain- Specific Program Generation, Springer, 2004
